Project Procurement Tender Brief

Country Department Andean Group (CAN)

Bolivia, Colombia, Ecuador, Peru and Venezuela

**Bid Title****Provision and Installation of LED Luminaires and Related Public Lighting Services in the Municipality of Oruro****Country**

Bolivia

Sector

Energy

Project nameElectricity Infrastructure Expansion Program
Component 2**Region of the country**

Highlands in the western region

Subsector

Energy Efficiency in Public Lighting

Executing Agency

Ministry of Hydrocarbons and Energy

Bid description

The objective is to reduce electricity consumption in the Public Lighting (PA) systems of the Municipalities of Oruro and Potosí through the implementation of Energy Efficiency (EE) measures. The purpose of the tender is to replace more than 30,000 conventional luminaires with efficient luminaires in the PA systems of the avenues and streets of the Autonomous Municipal Government (GAM) of the city of Oruro. The replacement will allow: (i) energy and economic savings, contributing to reduce CO2 emissions, as well as demonstrate its feasibility to extend the implementation to other municipalities; (ii) improve the visual performance, environment and safety of urban environments with respect to other technologies; and (iii) strengthen the institutional capacities in terms of EE of the GAM Oruro and the institutions benefiting from the Program's investments.

ENDE

Bid description

The purpose of this Contract is for the "STUDIES, ENGINEERING, SUPPLIES, CONSTRUCTION OF CIVIL WORKS, ELECTROMECHANICAL ASSEMBLY, TESTING AND COMMISSIONING OF LOS TRUNCOS AND SAN IGNACIO DE VELASCO SUBSTATIONS", as well as the transfer of technology and training of ENDE's personnel, under the Plant Installation modality, with the exception of the supplies to be provided by ENDE indicated below:

Formation of the substation platform, perimeter enclosure of the substation with Olympic mesh, covering of external slopes of the platform and acquisition of single-phase power reactors.

Execution of the studies, design, engineering, supply, construction, electromechanical assembly, testing, commissioning, as well as the preparation of technical specifications, everything necessary and required for the construction of the substations corresponding to the CONSTRUCTION OF THE SAN IGNACIO DE VELASCO INTERCONNECTION TRANSMISSION LINE TO THE SIN Project in the Plant Installation mode, which must be to ENDE's satisfaction, complying with the current operating and regulatory standards of the Bolivian system.

It is clarified that the Contractor is responsible for the design, engineering, supply of the elements, parts or equipment supplied at his expense. Furthermore, he is responsible for a complete and functional supply, even when certain parts or components are provided by different manufacturers or suppliers.

Any item, device, component or accessory that is necessary to make all other components of the scope capable of operating satisfactorily and reliably shall be covered by the Contractor and included as part of the supply.

The Contractor shall validate and carry out the necessary complements of both supplies and works of all the works according to its studies and engineering designs.

Likewise, the Contractor shall take all necessary steps and obtain all necessary permits for the construction of the substations.

| Colombia | Colombia |
| Sector | Subsector |
| IFD | FMM |
| Project name | Executing Agency |
| Program to strengthen multipurpose cadastral management | Agustín Codazzi Geographical Institute (IGAC) |

Bid description

The Cadastral Management System (SGC) is an information system that incorporates multipurpose cadastre data from the entities covered by the Agustín Codazzi Geographic Institute (IGAC). IGAC is responsible for keeping the cadastre updated in most of the country, and currently has an information system with obsolete technology and a data structure that does not meet the requirements of the multipurpose cadastre. The SGC is in the design phase based on the LADM-COL cadastral data structure, an adaptation to Colombia of the international standard. The SGC will capture cadastral data from field surveys, perform quality control processes, and exchange data with other systems to integrate administrative processes. It is expected that a software factory will be contracted to work with IGAC for its development and implementation.

OPERATION # (CO-L1156)

PROJECT # (3610/OC-CO)

Bid Title

Hydraulic optimization of the potable water distribution matrix system from Loma Alta to R9 in the District of Buenaventura

Country

Colombia

Region of the country

Colombia

Sector

INE

Subsector

WSA

Project name

"Water, Basic Sanitation and Electrification Program for the Colombian Pacific as part of the "Todos Somos PAZcífico" (We are all PAZcífico) Plan".

Executing Agency

Ministry of Equality and Equity

Bid description

Construction of the express potable water mains from the Tubería del Norte drinking water treatment plant, from the Loma Alta tanks to the R9 hydraulic sector. The project consists of two sections, a completely new first section that leaves the Loma Alta tanks and reaches the lot where the Gamboa tank is located, and a second section that replaces the existing 30" pipe from Gamboa to R9. It is important to mention that this route will not enter or connect at any time with the Gamboa tank and its operation will be exclusive for the Loma Alta system. The entire route from the Loma Atta tank to the point known as R9 will be in 42" WSP steel pipe. Under the scheme of the selected alternative, it is found that by supplying the Loma Alta tanks area with a single pipe, the risk of illegal connections is minimized. Likewise, by rehabilitating the section from Gamboa to R9 (from 30" to 42"), multiple illegal and fraudulent connections that exist in these lines will be eliminated, and a process of normalization of connections will be carried out, thus attacking the problem of water losses in the municipality of Buenaventura.

The definitive modification guarantees 24-hour service pressure throughout the area of influence of the Loma Alta tanks and reduces the risk of fraudulent connections along the proposed route.

OPERATION # (PE-L1224)

PROJECT # (4873/OC-PE)

Bid Title

Intelligent video surveillance system in private cloud (on premise)

Country

Peru

Region of the country

Lima

Sector

IFD

Subsector

ICS

Project name

Improving crime prevention services for the population most vulnerable to crime and violence in **Peru**.

Executing Agency

Executing Unit No. 037 Perú Seguro 2025, of Pliego 007: Ministry of the Interior.

Bid description

The purpose of this tender is to implement a comprehensive intelligent video surveillance platform to guarantee citizen security, through the acquisition of equipment that will provide police stations with the necessary technological tools. These tools will contribute to combat citizen insecurity at the national level. The platform must have real-time analysis and artificial intelligence capabilities to meet citizen security needs and automatically issue predefined security alarms that require appropriate and timely attention. In addition, video images should be stored in the cloud for subsequent forensic and intelligence analysis, through behavioral patterns or other techniques that allow establishing police operations.

This tender includes the development and implementation of an intelligent video surveillance system using a private cloud, as well as the adaptation of the area designated for the video surveillance data center of the National Police of Peru. This involves the installation of a false floor, the routing and concealment of electrical, voice and data installations, the implementation of a false ceiling or aerial trays suitable for the laying of communications installations, and the supply and installation of backup electrical equipment (generator, transformer, UPS, control panel, transfer panel, among others). The lighting of the 136 m2 area of the data center must also be guaranteed, and an access control system must be provided and installed, as well as its hardware equipment in the video surveillance center.

The works will be carried out at the headquarters of the PNP Main Data Center, located in Plaza 30 de Agosto S/n Urb. Corpac San Isidro - MININTER; also, 238 Video Surveillance Cameras will be installed in 25 PNP Police Stations in the interior of Peru.

The contract will be a turnkey contract, with an estimated execution period of 200 calendar days, for the commissioning of the video surveillance system and related services for a period of 12 months.

The CHFM is located in the department of Cortés, 230 kilometers from Tegucigalpa. It started operating in 1986 and has an installed capacity of 300 Megawatts (MW). In 2018, its generation amounted to 1,625 Gigawatt hours (GWh). CHFM is the hydroelectric power plant with the highest contribution to the SNI, with a contribution of 16.4% of the energy generated in the SNI. In addition, it is the main regulator of voltage, primary and secondary frequency and reserve margins, essential auxiliary services to maintain grid reliability. The high participation of ERV represents a challenge in the operation of the SNI and the regional transmission grid, as well as in energy dispatch.

Increased stop-start cycles lead to increased wear on the turbine governors, alternating mechanical stresses on the turbine speed governor and ball valves, and premature aging of the generator and transformer insulation due to increased cooling and heating cycles. According to information provided by the generator manufacturer, each start-up of the unit is equivalent to the aging produced by 20 hours of operation. This additional wear and tear leads to the need to replace these systems much earlier than foreseen in the short and medium-term maintenance plan that was prepared prior to increasing ERV's significant participation. This acquisition foresees the modernization of the CHFM and the development of studies and plans to evaluate the increase of the plant's capacity. Modernization acquisitions will be made in the generation plant and substation to replace critical components that have suffered high wear and tear or that do not have spare parts in the world market to work in the current conditions according to the configuration of the generation matrix (Speed Regulators and Intake Valve for 4 Francis turbines of 75 MW and 2 Francis turbines of 1.7 MW), with their respective commissioning, training and design of a preventive maintenance program. As the project is in an area of direct influence for the community, community engagement, social inclusion and environmental protection programs will be carried out at the project site.

OPERATION # (HO-L1239)

PROJECT # (5790/BL-HO)

Bid Title**Construction and Equipment of the Trauma Hospital of San Pedro Sula, Cortes****Country**

Honduras

Region of the country

San Pedro Sula, Cortes

Sector

Health

Subsector

Roads

Project name

Hospital Network Strengthening Program

Executing Agency

State Secretariat in the Health Office (SESAL)

Bid description

The San Pedro Sula Hospital, Specialty Hospital or type 3, reference of the second level of care facilities type 1 and 2, is located in San Pedro De Sula, Department of Cortés, geographically located between the coordinates 15°31'31.4 "N, 88°02'24.4 "W. The Area of Influence defined for the project corresponds to the radius of action of coverage of the Dr. Mario Catarino Rivas Hospital, a second level care hospital, classified as a specialty hospital according to the categorization of facilities in accordance with the National Health Model.

The architectural proposal proposes approximately 18,591 m2 of new infrastructure (150 beds) on an available land of 24,000 m2 and proposes the construction of blocks or areas where enclosures and hospital environments will be located such as classrooms, medical boxes, dental boxes, procedure rooms, central pavilions, angiography pavilion, undifferentiated unit beds, pension beds, ICU beds, ICU beds, and ICU beds. The proposal seeks to adapt to the topography and existing levels of the terrain, as well as to its particular characteristics of connection with the perimeter roads to the terrain.

The main buildings by use are the management and administration areas, outpatient service, hospitalization and operating rooms, emergency service, diagnostic support, pharmacy, general services, supply (logistics and warehouses), general support, industrial support service and technical enclosures. The trauma hospital will be part of the SESAL health network and will attend to the immediate consequences that put the patient's health at risk caused by an SBI and, in turn, will initially attend to the physical and, potentially, psychological sequelae caused by the SBI in order to continue the patient's recovery and rehabilitation in another institution of the network. It is planned to have the infrastructure to provide emergency trauma, cardiovascular, general surgery, neurosurgery, otorhinolaryngology and ophthalmology services. In this sense, it should have emergency care services, auxiliary diagnostic services, hospitalization rooms, a morgue, and a heliport.

In order to contribute to closing gender gaps, inclusive participation will be promoted and the work will be aligned with the MPAS Policies.

Approximate amount

US\$69 million

OPERATION # (HO-L1239)

PROJECT # (5790/BL-HO)

Bid Title

Construction and Equipment of the Tegucigalpa Trauma Hospital

Country

Honduras

Region of the country

El Zarzal, Tegucigalpa

Sector

Health

Subsector

Roads

Project name

Hospital Network Strengthening Program

Executing Agency

Secretariat of State in the Health Office (SESAL)

Bid description

Tegucigalpa's high-complexity hospital, Hospital de especialidades or type 3, referral of the second level of care facilities type 1 and 2, is located in the Zarzal Tegucigalpa sector, municipality of the Central District, Department of Francisco Morazán, geographically located between the coordinates 14°04'12.9 "N 87°12'14.2 "W.

The project consists of a construction on a new site without considering demolitions. It is important to point out that the site is located in an urban area, so the architectural approach and the proposed volumetry are based on the concept of defining main axes and the conformation of internal meeting spaces, which arise from the analysis of the site conditions and cultural characteristics of the area, allowing the integration of the different buildings with the circulations that are generated inside the site.

The architectural proposal proposes approximately 21,615.87 m2 of new infrastructure (160 beds) on an available land of 66,481.211 m2. The proposal seeks to adapt to the topography and existing levels of the site, as well as to its particular characteristics of linkage with the perimeter roads to the site.

The main buildings are the treatment, diagnostic, general clinical support services, administrative services and general services areas. It is planned to have the infrastructure to provide emergency trauma, cardiovascular, general surgery, neurosurgery, otorhinolaryngology, and ophthalmology services. It should have emergency care services, auxiliary diagnostic services, hospitalization rooms, a morgue, and a heliport. The emergency care service will have External Cause Injuries (ECI), surgical block with operating rooms, intensive care unit with adult and pediatric bed capacity, pain management, orthopedic and surgical hospitalization rooms, imaging and MRI, CT scanner, conventional X-ray, X-ray with fluoroscope and ultrasound, as well as clinical laboratory and pathology. The conceptualization and design of the project will be based on the list of environment requirements developed in the Medical Architectural Program.

OPERATION # (CR-L1139)

PROJECT # (4864/OC-CR)

Bid Title

Mitigation Works Project in Colonia Nueva Jerusalén No.2, Colonia Montes de los Olivos and Colonia Brisas del Mogote

Country

Honduras

Sector

Water and Sanitation

Project name

Mitigation Works Project in Colonia Nueva Jerusalén No.2, Colonia Montes de los Olivos and Colonia Brisas del Mogote.

Region of the country

Southern Paraguayan Chaco

Subsector

Water systems

Executing Agency

Honduran Social Investment Fund (FHIS)

Bid description

The work consists of 3 lots broken down as follows:

LOT 1 Montes de los Olivos

Colonia Montes de los Olivos is located in the northwestern sector of the city of Comayagüela in the municipality of the Central District, at the height of the last stage of the peripheral ring road that connects with the exit to the north. It is bordered to the north by Colonia Unidad y Esfuerzo, to the south by land owned by SANAA and Colonia Fuente de Vida, to the east by Colonia Nueva Jerusalén No.2, and to the west by land owned by SANAA. The main access to the Colonia is through the main street of Colonia Arturo Quezada. Coordinates at the centroid of the site polygon, based on UTM projection WGS84 16P X: 472423, Y: 1556478.

Sanitary Sewer

It is proposed to construct an interceptor sewer that will collect part of the sewage from Colonias Monte de Los Olivos, Nueva Jerusalén No.2 and Brisas del Mogote; this sewer will start at the point with UTM coordinates 1556613.77 m N, 472484.29 m E and with a ground elevation of 1,236 meters above sea level in Colonia Nueva Jerusalén No.2, entering the reserve basin through a conventional sewer line.

Drinking Water

Colonia Monte de los Olivos will be supplied from the tank that will be built in Colonia Nueva España, from there the water will be pumped to a 100,000 gallon tank that will be built on the property that corresponds to the Water Board, where the offices of the Water Board will be located.

LOT 2 New Jerusalem

Colonia Nueva Jerusalén No. 2 is located in the northwestern sector of the city of Comayagüela in the municipality of the Central District, at the height of the last stage of the peripheral ring road that connects with the exit to the north. It is bordered to the north by Colonia Unidad y Esfuerzo and Colonia Australia. To the south with land owned by SANAA; to the east with land owned by SANAA and Colonia Brisas del Mogote; to the west with Colonia Montes de los Olivos. The main access to the Colonia is through the main street of Colonia Arturo Quezada. It is located at the coordinates of the centroid of the UTM WGS84 16P polygon X: 474382, Y: 1556171.

Main Collector

The construction of an interceptor collector (which collects wastewater from Colonia Montes de los Olivos) that will collect part of the sewage from Colonia Nueva Jerusalén No.2. and Brisas del Mogote is proposed; this collector starts at the point with UTM coordinates 1556613.77 m N, 472484.29 m E and with a ground elevation of 1,236 meters above sea level in Colonia Nueva Jerusalén No.2, entering the reserve basin through a conventional sewer line.

Sanitary Sewer

Sanitary sewers will be built for 1,329 homes in the area that can drain by gravity to the main sewer and connection points in the surrounding neighborhoods, with pipes ranging from 12" to 6" in diameter.

Drinking Water

The water will be taken from one of the tanks to be built in Colonia Nueva España to the tank to be rebuilt in Colonia Nueva Jerusalén No. 2, and then distributed through household connections.

Road System

It is proposed to clean, shape, scarify and place sub-base for an estimated area of 20,000 m2 of street, intervening only the main arteries as far as it can cover the scope estimated in the budget.

LOT 3 Brisas del Mogote

Colonia Brisas del Mogote is located in the northwestern sector of the city of Comayagüela in the municipality of the Central District, at the height of the last stage of the peripheral ring road that connects with the exit to the north. Bordered on the north by Colonia Australia and land of the Lopez heirs. To the south with land owned by SANAA and Colonia Nueva Jerusalén No. 2; to the east with Colonia Nueva España; to the west with Colonia Nueva Jerusalén No.2. The main access to the Colonia is through the main street of Colonia Arturo Quezada; it is located at the coordinates of the centroid of the UTM WGS84 16P polygon X: 472610, Y: 1556546.

Sanitary Sewer

The sewage collection system for the non-intrusive zone will be a conventional system that will use pipes to collect sewage from the homes and convey it to the sewer located on the street that borders Colonia Nueva Australia.

Drinking Water

For this colony, water is currently supplied from the 200,000 gallon red metal tank located in the sector of El Mogote, Colonia Nueva España directly to the water distribution network, for which a redesign is needed.

OPERATION # (DR-L1158)

PROJECT # (5637/OC-DR, 5638/KI-DR)

**Bid Title**

Construction of Secondary Networks and Home Connections by Results of the Boca Chica Sanitary Sewer System

| | |
|---|--|
| Country | Region of the country |
| Dominican Republic | Boca Chica and La Caleta |
| Sector | Subsector |
| Water and Sanitation | Urban Sanitation |
| Project name | Executing Agency |
| Universal Sanitation Program for Tourist and Coastal Cities | National Institute of Water and Sewerage (INAPA) |

Bid description

The municipality of Boca Chica has problems of high pollutant loads on the bay's beach, caused by uncontrolled dumping due to insufficient or non-existent sanitary sewage systems.

Such problems generate an accelerated deterioration of the environmental quality of the beach and put at risk the development of Boca Chica as a fundamental tourist pole for the country. For this reason, the Boca Chica Aqueduct and Sewer Corporation (CORAABO) promoted the project to "Establish the Sanitation System to Create the Sanitation Barrier in Boca Chica Bay", which later incorporated the area of La Caleta.

In this phase, the collection and conveyance systems for each of the drainage areas will be built. These systems consist of secondary networks and small pumping stations. The secondary collectors are responsible for transporting the sewage from the urban developments to the main collectors. These secondary collectors vary from 160 mm to 400 mm, with the 160 mm diameter having the largest number (87%); the type of material used in the Contractor's conceptual design is HDPE polyethylene. The pipes will carry the wastewater in free sheet inside the pipes, discharging all the secondary networks into the main collectors. Polyethylene (HDPE) will be used in the project area because of its good hydraulic performance, resistance to stress and good performance in seismic events. Approximately 10% of the total existing network in Boca Chica is made of polyvinyl chloride PVC, which will be maintained and the simple concrete one will be replaced due to its current operating conditions. The secondary networks of the municipalities of Boca Chica, Andres and La Caleta were structured using the condominium sewerage methodology. This choice sought to guarantee an optimized project in terms of execution and operating costs. In this region, more than 184 kilometers of what are called basic sewerage networks were projected within the condominium systems.

The sanitary sewerage installations of each of the dwellings must be connected to the secondary networks through branches to be built in each of the urban blocks of the project area. The services and materials will be paid for by quantities and unit prices, including the physical cost and the applications of the Social Action Plan for each of the household connections according to the type of intervention certified by the Contractor and approved by the supervisor of the Works. However, retentions for Home Connections by results will only be released for refund to the Contractor in accordance with the presentation of the certificates approved by the supervisor of the Works.

Sector

Water and Sanitation

Subsector

Sanitation in rural and peri-urban areas

Project name

Environmental Sanitation Program for the Reconquista River Basin

Executing Agency

Undersecretary of Finance of the Ministry of Treasury and Finance of the Province of Buenos Aires

Bid description

The development of this project is based on the sanitation, cleaning and reconversion of the Cava Stefani landfill, which is located in the District of Moreno, Province of Buenos Aires.

The project consists of the construction of an aggregates and forestry waste treatment plant for the reception, conditioning and treatment of waste consisting mainly of: construction and demolition waste, soil removal, waste from pruning and maintenance of gardens, parks and/or urban trees, leaves, branches and trunks.

Reusable elements that can be used to fill the pit, improve streets, and supply the private sector can be separated and conditioned. The branches will be chipped for later use in the maintenance and construction of trails, decoration in parks and squares, and as a fundamental part of the composting process of organic waste and soils. This composting will be done externally, by operators of this type of waste.

The plant will have all the services and infrastructure necessary for efficient management from a technical and human point of view. Teaching and training spaces are planned for the personnel, with the intention of transmitting values that add to their work and personal development.

The estimated execution time for the works is 12 months (365) days.

OPERATION # (AR-L1273)

PROJECT # (4427/OC-AR)

Bid Title

Pluvial Drainage System - A° Torres - Stage: District of Merlo

Country

Argentina

Sector

Water and Sanitation

Project name

Drainage and flood control project
in the province of Buenos Aires

Region of the country

Province of Buenos Aires

Subsector

Sanitation in rural and peri-urban areas

Executing Agency

Ministry of Infrastructure and Public Services of the
Province of Buenos Aires

Bid description

The project is located in the district of Merlo, in the center-west of Greater Buenos Aires, 34 km from the Autonomous City of Buenos Aires. The purpose of the project is to alleviate the urban impacts of rainfall between Belén, Bertrand Russell, Lafayette and surrounding areas, in the Merlo district. The work consists of the construction of a storm drainage system, consisting of a main conduit and nine branches, in the form of rectangular or circular reinforced concrete conduits, which flow into the Torres stream, whose final discharge is the Reconquista river. For branches and sub-branches, circular conduits with diameters from 0.80m to 1.40m were designed and from there on rectangular reinforced concrete conduits. The final section of the main collector is B=2.70 H=1.40m. Completion period: 540 calendar days.

Approximate amount

US\$7 million

Water

Project name

Drainage and Flood Control Project in the Province of Buenos Aires

Executing Agency

Ministry of Infrastructure and Public Services of the Province of Buenos Aires

Bid description

Roggero Dam, eleven culverts on the Buen Ayre road and complementary works. The works will be carried out in the districts of Ituzaingó, Merlo, Moreno, Hurlingham, Tres de Febrero and General San Martín in the province of Buenos Aires. The tasks will include the repair of the loose material dam (cleaning and weeding of slopes; maintenance of vegetation cover; embankment to restore the dam slopes; slope protection with geo blanket; cleaning and shaping of the drainage channel; construction of wire fences) as well as the restoration of the crest and the reconstruction of the dissipation basin (repair of joints, cracks; bottom unloaders; concrete structures; metal structures; lighting; cleaning of barbicans and aeration ducts; provision and execution of horizontal and vertical signaling). The construction of control and monitoring centers, necessary to ensure proper operation, will also be carried out. The sewer system with sluice gates on Camino del Buen Ayre will also be upgraded. Likewise, as complementary works, it is foreseen the readjustment and improvement of the riverside roads and lighting through the installation of metallic street lighting columns with LED technology luminaires and subway power supply. The readjustment of the works as a whole will improve the operation and integral functioning of both the dam and the sewage system with floodgates and access through the complementary works, facilitating the evacuation and regulation of water surpluses, with direct benefits for the entire population included in the Reconquista River basin. The construction period is 548 calendar days (18 months).

OPERATION # (AR-L1273)

PROJECT # (4427/OC-AR)

Bid Title

Evaluation of the Hydraulic Behavior of the Zanjón Madero Basin - Design of the Pumping Station and Complementary Works - San Martín District

Country

Argentina

Region of the country

Province of Buenos Aires

Sector

Water and Sanitation

Subsector

Urban drainage

Project name

Drainage and Flood Control Project for the Province of Buenos Aires

Executing Agency

Ministry of Infrastructure and Public Services of the Province of Buenos Aires.

Bid description

The works are part of the Zanjón Madero Drainage System in the town of José León Suárez in the district of San Martín in the province of Buenos Aires. The following interventions are foreseen within this bidding process:

- A) Piping of Lebensohn Street Ditch: The piping will be made with precast reinforced concrete pipes in a first section, it will include the connection of an existing by-pass at the low level crossing, the disconnection of Branch 4 to which it is currently connected and the connection to the Lebensohn Ditch.
- B) Extension of the urban storm drainage network: New sections of conduits and drains (new and to be modified) will be added.
- C) Adequacy of the entrance chamber to the existing work of the Zanjón Madero: It is a work of entrance to a collecting chamber of flows coming from the Main Conduit; so that, by means of a transition, they can be conducted through a crossing culvert in the Camino del Buen Aire towards the Zanjón Madero.

Construction of Pumping Station and Reservoir: The Pumping Station includes: 5 submersible electric pumps + 1 back up pump, building, command room, perimeter fence, security railings and lighting. The reservoir will consist of a 14.90 m long reinforced concrete box with a fixed lip and will serve as an energy dissipater for the water to flow to the receiver from a height of approximately 2.00 m and from there to the Reconquista River, which acts as the final receiver. Useful volume: 45,000 m³. Finally, a closing embankment will be built with a crowning width of 5 meters to avoid the overflows coming from the Reconquista River. Its function will be to protect, protect and defend against the floods of the Reconquista River.
Work term: 540 days (18 months).

Bid Title**Renovation of the Data Center of the Ministry of Infrastructure and Public Services of the Province of Buenos Aires****Country**

Argentina

Region of the country

Province of Buenos Aires

Sector

Development Institutions

Subsector

-

Project name

Hospital Network Strengthening Program

Executing Agency

Ministry of Infrastructure and Public Services of the Province of Buenos Aires (MISP)

Bid description

MISP needs to make adjustments to its data center, which does not contemplate performance and security measures compatible with current needs and which in turn requires increasing capacities with the incorporation of hardware and software, so it is necessary to acquire a hyperconvergence infrastructure. This modality allows eliminating traditional IT management issues by grouping data center services such as server, storage and network, allowing them to be managed in a single application. A software-defined infrastructure that separates infrastructure operations from system hardware and converges them at the hypervisor level into a single block, to leverage software-defined intelligence to break down storage and processing silos, allowing them to run and be managed on the same server platform, eliminating inefficiencies and speeding up processing.

This bidding process for goods and related services includes: upgrades to the current Data Center; acquisition of 6 hyperconverged nodes; implementation of a hyperconverged networking solution; backup software; cooling system; centralized uninterruptible power supply (UPS); data center cabinets and control. Deadline for delivery: 90 days.

MINISTRY OF INFORMATION AND COMMUNICATION TECHNOLOGIES

Bid Description

It is a building or complex of buildings where organizations, companies, academic institutions and other actors in the area of innovation linked to information technologies will be housed. It is expected to have specific spaces for the development of innovation. This seeks to promote the development of an innovation ecosystem in a predefined territory, creating synergies for the use of technological infrastructures and Industry 4.0 capabilities, to incorporate value into production chains, develop new products and services, and create new business opportunities. business locally and internationally. It will serve to attract new promoters and internationalization of R&D&I, expanding the way Science and Technology is valued.

Title of the bid Contracting of connectivity services for Hospitals and Family Health Units - SECOND STAGE

Country

Paraguay

Sector

Reform/Modernization of the State - Health
Science and Technology

Project Name

Digital Agenda Support **Program**

Country's region

Eastern and Western

Subsector

Online Government e- Health - Telecommunications
infrastructure

Executing agency

MINISTRY OF INFORMATION AND COMMUNICATION
TECHNOLOGIES

Bid Description

The MSPBS is carrying out a Digital Transformation plan which includes the implementation of a Health type management system. Information System (HIS). The Digital Agenda Program contributes to the implementation of the HIS in health posts throughout the territory through equipment, connectivity and implementation support (change management.) The HIS software was designed and developed and is maintained and monitored by the Cooperation from Taiwan.

The Connectivity, Endowment and Internal Technological Infrastructure of 105 (one hundred and five) Family Health Units will be contracted. The first stage focused on larger centers, such as hospitals.

Amount

US\$500,000

OPERATION # (PR-L1156)

PROJECT # (4690/OC-PR)

Title of the bid

Hiring of a firm for the supply and installation of equipment for the Acaray I Generation System

**Country**

Paraguay

Sector

Energy

Project Name

Rehabilitation and Modernization Program of the Acaray Hydroelectric Power Plant

Country's region

Alto Paraná Department

Subsector

Hydro power plant

Executing agency

National Electricity Administration, ANDE

Bid Description

The Acaray Hydroelectric Power Plant (CHA), the only plant 100% owned by the National Electricity Administration (ANDE), is experiencing a high degree of deterioration, not only due to its age but also due to the lack of investment and major maintenance caused by budgetary, technical, and management limitations in the maintenance plan. Due to the reasons summarized in the comprehensive diagnostic study of the CHA, damages to the turbines due to cracks or high vibration, short circuits in the generator windings, and failures in transformers and auxiliary equipment are becoming more frequent. Frequently, some of the four units remain inoperable for days or weeks, and in some cases for many months. Likewise, in line with what was revealed in the comprehensive diagnosis of the CHA, there is a need for greater training of technical and managerial staff, especially for the Operation and Maintenance (O&M) of the plant once modernized, upon completion of the incorporation of equipment with new technology, as well as for monitoring and tracking of rehabilitation tasks.

In this regard, based on the updated planning, it is foreseen the hiring of a company to carry out: (i) the Comprehensive Rehabilitation and Modernization of the Hydromechanical Equipment, Hoisting Means, Forced Conduits, the Alternating and Direct Current Electrical Supply Systems of the Acaray and Yguazú dams and the Acaray I and II power plants; (ii) Renewal of the Generation Train Equipment of the Acaray I Power Plant; and the Automation and Control System of the Acaray-Yguazú Complex.

OPERATION # (UR-L1164)

PROJECT # (5668/OC-UR)

Bid Title

"Implementation of Digital Transformation Projects of the Public Lighting Service"

Country

Uruguay

Sector

-

Project name

Development and Strengthening of Fiscal Management and **Subnational** Services Program

Region of the country

East (Maldonado and Rocha) and North (Rivera)

Subsector

Energy efficiency

Executing Agency

Office of Planning and Budget (OPP)

Bid description

The provision of basic public services by Uruguay's Departmental Governments misses out on savings opportunities through greater use of Information and Communication Technologies (ICTs) as a result of the IDB's 2022 study "Identification of opportunities for improving fiscal management by incorporating ICTs". In public lighting, energy costs could be reduced by at least 25% through billing by metering (instead of counting), dimming of light intensity (dimming) adapted to predefined time cycles, real mobility based on sensors, and mobility patterns generated through big data or artificial intelligence.

The purpose of this tender is to acquire and implement a management system in Maldonado, Rocha and Rivera for the digital transformation of subnational public lighting services that will enable light attenuation, making it possible to save electricity consumption in public lighting in the areas to be intervened, as well as to train the human resources involved in the participating municipalities. The necessary equipment will also be acquired and installed to carry out the programmable dimming of such lighting, and training will be provided to representatives of the participating Departmental Governments to ensure the correct operation of the dimming management systems over time.

Approximate amount

US\$450,000

OPERATION # (UR-L1183)

PROJECT # (5410/OC-UR)

Bid Title**Sanitation Monitoring Center (Functional monitoring of Montevideo's sanitation and drainage system)****Country**

Uruguay

Region of the country

South - Montevideo

Sector

Water and Sanitation

Subsector

Sanitation systems

Project name

Montevideo Sanitation Program - VI Stage (PSU VI)

Executing Agency

Municipality of Montevideo

Bid description

The Bank's Program, among other things, seeks to strengthen the institutional capacity of the Municipality of Montevideo to improve integral sanitation management by executing strengthening actions linked to the improvement of technical, management and monitoring capacities with a focus on digital transformation and innovation, including the implementation of a management and monitoring center with a functional monitoring network that allows for the calibration of the hydrological-hydrodynamic model used and the implementation of an asset management plan. With this contract, a Management and Monitoring Center will be installed to control the functioning of the sanitation network of the city of Montevideo, including the first year of operation and maintenance, and approximately 150 sensors will be installed at 85 points in the city, the sanitation system and the water courses where variables such as level, flow or presence of gases will be monitored, thus strengthening the capacities of the Municipality of Montevideo to improve the management of integral sanitation.

Subsector

Sanitation systems

Project name

Montevideo Sanitation Program - Phase VI (PSU VI)

Executing Agency

Municipality of Montevideo

Bid description

As a result of the Urban Sanitation Programs financed by the Bank and the actions of the Municipality of Montevideo, approximately 9 out of every 10 inhabitants of the urban area of Montevideo have access to an adequate sanitation system; however, there are still 200,000 inhabitants located in vulnerable areas of the city (including irregular settlements) without coverage and with the sanitary risk that this entails, with challenges that affect the healthiness and environmental sustainability of the areas where they live.

The bid for the second package of works is aimed at increasing the coverage and quality of sanitation services in vulnerable areas of the city of Montevideo and consists of the following three lots:

LOT 1 - Construction of sanitation and drainage networks for Paso de la Arena basins 2 and 4 including Executive Project.

LOT 2 - Construction of sewage and drainage networks for Bola de Nieve basin A including Executive Project.

LOT 3 - Construction of Pumping Stations (PS) for Paso de la Arena basins 2 and 4 and Bola de Nieve basin A including Executive Project and commissioning of the PS.

**Bid Title**

Survey, development and implementation of digital property and transit guides, including support and maintenance

Country

Uruguay

Sector

-

Region of the country

Uruguay

Subsector

-

Project name

Program for the Adoption of Digital Technologies in the **Uruguayan** Agricultural and Livestock Sector

Executing Agency

Ministry of Livestock, Agriculture and Fisheries

Bid description

Agricultural production is rapidly transforming into a high-tech industry, in which digital disruption has generated a transformation in production and marketing processes. The bank's program seeks to improve the competitiveness of the agricultural sector by deepening the digital transformation of MGAP's services and activities, promoting the adoption of digital technologies, with an emphasis on family farmers and rural women.

The purpose of the contract is to provide project management services, solution analysis, architecture, design, construction, deployment, testing, technology transfer, support and maintenance for the different projects being carried out at MGAP:

- the property and transit guide (livestock products, native forest, farm products, beekeeping products, fishery products, among others),
- single digital management portal for productive entities,
- integration of records to REUNE (Registro Único de Entidades productivas),
- reengineering of current applications, where necessary, and
- systematization of processes that are currently carried out manually.

These projects are expected to reduce costs and simplify procedures, with direct effects on the profitability and satisfaction of producers, while significantly improving the coordination of institutions involved in the control, transportation and registration of operations.

OPERATION # (UR-L1190)

PROJECT # (5763/OC-UR)

Bid Title

Paving Paso de la Cruz - Mellizos

**Country**

Uruguay

Sector

Transportation

Project name

Productive Rural Roads Improvement Program II

Region of the country

Litoral (Río Negro)

Subsector

Roads

Executing Agency

Office of Planning and Budget (OPP)

Bid description

Change of pavement standard / Hydraulic works

Uruguay has approximately 40,000 km of Departmental Road Network, of which 12,000 km are of high economic relevance because they act as collector roads for agricultural production to the National Road Network and provide connectivity to smaller departmental localities and rural towns. The Bank's program seeks to provide reliable access to services and markets for the rural population, forestry and agroindustrial production, improve the quality of services of productive departmental roads, and reduce the number of days of impassability of the roads intervened by the program. Within the framework of the program, the paving of the Paso de la Cruz to Mellizos road will be tendered, which is currently a gravel road in good condition in general, with undulations due to surface runoff in curves and in some low areas and bridge headlands there has been a recharge with rock from the surrounding area, presumably due to erosion, the speed bumps, narrow bridges, schools and some curves are marked. At the entrance to Paso de la Cruz and Paso de los Mellizos, there are signs indicating heavy traffic detours, which in Paso de los Mellizos circulate outside the town. The towns mentioned have lighting, speed bumps, speed limit signs, educational and health centers, as well as other places of interest. The road has bridges, rectangular culverts, small circular culverts, and speed bumps. The circular culverts are in good condition, with clogging by material from the road itself. The speed bumps are made of concrete and are in good condition. The H-type culverts show some deterioration. The intersections are unsignalized, except for heavy traffic detours. In most cases they allow wide turns.

OPERATION # (UR-L1193)

PROJECT # (5783/OC-UR)

Bid Title

Consulting - Evolution and Reengineering of Administrative and Financial GRPUy, Architecture and Integration, and Expansion in Central Administration (Implementation in Central Administration Agencies and Accompaniment and Stabilization)

Country

Uruguay

Sector

-

Project name

Digital Transformation Program of the
Fiscal Management

Region of the country

South - Montevideo

Subsector

-

Executing Agency

Ministry of Economy and Finance (MEF)

Bid description

The overall objective of the Bank's program is to improve the efficiency of fiscal management in Uruguay by improving the efficiency of public expenditure management, the efficiency of public procurement and the efficiency of tax administration collection, which is expected to be achieved through the digital transformation of expenditure management and tax administration systems, including the review of their processes and functionalities. The Government Resource Planning Platform (GRP.uy) is the tool for automating the administrative management processes of public agencies and measuring institutional production costs. However, the platform currently suffers from some problems such as its low adoption by the executing units of the State, as well as the duplication of functionalities with the Integrated Financial Information System (SIIF), with the State Procurement and Contracting System (SICE) and the lack of use of the information available from systems such as the electronic invoice system.

It is expected to hire a consulting firm that is able to carry out a Functional / Technical Analysis and Design by surveying and analyzing the requirements of a subsection or several subsections, performing the corresponding analysis and validation management, in such a way that it is possible to obtain a clear and efficient Functional Specification (complete description of the behavior of the process to be developed). This process can be performed on the GRPUy or be related to the integration with external software. Diagnose and Recommend, performing an analysis of a situation and establish what are the results and trends, in order to determine what is happening, and then make the appropriate recommendations. Develop and Parameterize, carrying out the necessary adjustments to the GRPUy and/or in any of its facilities in the items, either by parameterization, configuration and/or development so that it adopts the behavior established in the functional and technical specifications previously defined. Test, certifying that the delivered product(s) and/or component(s) comply with the specified requirement(s). Perform massive data loads through data migration, transferring information from one or more sources, to a given GRPUy installation, performing the necessary transformations to ensure data consistency. Train, Document and Transfer knowledge through one or several instances of training on any existing element in GRP Estado Uruguayo. Installing one or several products and/or components in a specific environment and the necessary documentation (functional and technical) so that a third party (supplier and/or organization) can perform the corresponding installation or update in one or several independent environments. These activities must be developed on any of the ODOO versions, considering also in Open ERP, on which the GRPUy of the Uruguayan State is developed and/or in versions of later releases of ODOO in which it is decided to implement with its corresponding development framework.
