SOLARIS

ENDOPROSTHESIS

Balanced
Radial Strength

High Flexibility

Minimal
Shortening

SOLARIS Endoprosthesis is a flexible self-expanding stent graft, comprised of a durable electrospinning **PTFE** membrane encapsulating a **Nitinol** stent structure.

Features:

- Flexibility to Conform with the Anatomy. Designed for higher conformability to treat compromised vessels.
- PTFE membrane with instantaneous sealing.
- Optimized radial force with a proximal and distal bare stent to minimize the migration risk.
- Minimal Shortening during deployment with an accurate delivery system.

Pullback
Delivery System

Anti-Jump
Feature

Hydrophilic
Coating

Atraumatic
Flexible Tip

3 Tantalum
