DISCOLORATION

AMINOPLEX

Discoloration causes damage and this is because, regardless of the color removal process, the professional will need to "break the bonds" in your hair. This process is harmful. But Aminoplex is a bondmultiplier, which will multiply and rebuild these loops, decreasing the damage and leaving the hair stronger and healthier. By adding the product to the bleached powder and hydrogen peroxide, it will have a natural competitiveness between them. The Hair Fiber Regeneration System acts faster than the oxygen released by the oxygenated water molecule and first reaches the hair, generating its protection, avoiding excessive breakage and dryness of the hair. Next comes the oxygen, fulfilling its role, and discoloring the hair. This process happens almost simultaneously, but with advantage to the Aminoplex that allows to have the desired color with healthy strands. Now it is possible to have platinum and super blonde strands in extreme tones, without breaking, without being rubber like and healthy. Recommended for all types of chemical processes, the substance acts as a hair fiber protector.

DEVELOPERS

The developers serve to make the opening of the tones of the hair. It is a solution composed of water, cream and hydrogen peroxide with a percentage of 6% (20 volumes), 9% (30 volumes) and 12% (40 volumes). The higher the percentage or volume, the greater the tone aperture of the hair.

With proven efficacy and high-quality active Oxidizing Stabilized Revealing Emulsion, prevents hair dryness during coloration and discoloration processes.
