OHLALÁ!

The world is talking about Mamotest and the Telmed Foundation

“ In the book *Regulatory Hacking*, which was recently published in the United States, the prominent author **Evan Burfield** analyses world developments and mentions the high impact produced by the Argentinean Company Mamotest together with Fundacion Telmed.

Describing them as innovators and creators of a high social impact in Latin America with which they are able to save thousands of lives by using the most advanced methods in telemedicine. And, with their high-quality preventative diagnostics *significant savings are generated in the health system and society.* ”

Context

• The Role of Women

Women have obtained new spaces in society; are at the fore of major successes; play an essential role in the family and if they remain healthy, the household structure remains strong.

• Breast Cancer

Breast cancer is extremely common among women around the world and makes up 16% of all cancers. 69% of deaths are recorded in developing countries.*

*OMS, Carga Mundial de Morbilidad

• Telemedicine

Companies such as JP Morgan, Amazon, Samsung, Philips and Warren Buffett are venturing into this innovative health care system. It is estimated that the global growth in Telemedicine will reach \$48.8 billion by 2023.*

* P&S Market Research 2018

The Problem

Did you know that every year **7,000 women die** in Argentina from breast cancer?

Of all cancers, breast cancer is the one that kills most women. Our country is 2nd at risk from breast cancer in Latin America, being the most common disease in the world.

Breast cancer **specialists are scarce** in these countries.

Current legislation does not encourage women to have breast imaging screenings.

Education and awareness campaigns are insufficient.

78% of mammography units in Argentina are **analogue**.**

If the disease is diagnosed in time, **9 out of 10 women are saved**.***
