“

Prior to, and more important than, the calculation, is the idea, significantly modeling the material in order to accomplish its mission

”

TORROJA

OUR COMPANY

We are a consultancy company specializing in structural engineering, with the challenge of transforming the construction industry in Ibero-America, optimizing the relationship between the invested resources and the performance of the buildings.

We have a proven track record of more than 10 years of service to recurring customers in different countries, who choose us because of our values and the quality of our work.

With our technical solvency and innovative approach, we are proud to be leading the structural design industry in the region and providing solutions tailored to the needs of our customers.

We base our development on building lasting relationships and teamwork. Our approach is to analyze problems from the perspectives of all the interested parties, in order to provide creative and practical solutions that meet the overall objectives of the project and not just the minimum structural requirements.

RELIABILITY

We have proven technical solvency when it comes to solving each project, achieving the right balance between the efficient use of resources and an adequate level of performance.

COMMITMENT

We engage strongly with the client in the joint search for solutions that best suit the particular needs of each project.

RESULTS ORIENTATION

We connect with customers, partners and collaborators to design efficient structures, taking responsibility for our impact on the industry and the success of our customers.

INNOVATION

We have proven technical solvency when it comes to solving each project, achieving the right balance between the efficient use of resources and an adequate level of performance.

AREAS OF ACTIVITY

- ☐ **We develop value engineering**, by advising developers, designers and builders on the design of innovative and efficient structural solutions.
- ☐ **We offer services for civil and industrial works**, advising at all stages of life of the project; from conceptual design to the commissioning of the work.
- ☐ **We analyze existing projects looking to identify optimization opportunities** through creative design solutions.
