Promociones Fantásticas s.a.s.

In the search to provide environmentally friendly products, this oxo-biodegradable product has been developed, complying with national standards in accordance with Resolutions 683 and 4143 of 2012, as well as with the international regulations under FDA - MERCOSUR - CE.

Our products are made from original polymers that includes a prodegradant additive to facilitate product decomposition, without affecting its physical and chemical properties or product appearance. The breakdown process starts in environments where oxygen is present, and it is here where the first stage of breakdown occurs, which is evidenced by mechanical resistance and molecular weight loss. After this, the decomposed residues become hygroscopic, absorbing water, which allows it to be consumed by colonies of microorganisms that transform it into biomass, CO₂ and water, and as a result, completing the biodegradation process.

Additionally, our products can be subjected to conventional recycling processes for the manufacture of new plastic products, because the heat in this transformation processes inhibits the prodegradant agent, thus making the material wholly reusable.

The products produced encompass our entire product portfolio, including straws for industrial use, mass consumption straws, to hot drinks stirrers and sip straws and regular unbendable straws.

We are confident this new product material will allow you to meet your environmental objectives, and further strengthen our business relationship.

A glass that has not been properly washed transmits diseases such as herpes, oral candidiasis, fungus and periodontal infections, among others

Lloyd, B.J. The danger of the common drinking cup:

[http://hist.library.paho.org/Spanish/BOL/v5n2p70 .pdf](http://hist.library.paho.org/Spanish/BOL/v5n2p70.pdf)

Energy drinks, acidic juices and fizzy beverages increase the likely hood of cavities. With a straw, these drinks pass directly to the throat, avoiding contact with teeth. .

Temperature changes between beverages upon contact with dental fixtures causes crevices in the tooth enamel, increasing dental sensitivity.

Research conducted by Ruber Dental Hospital, Madrid.

Did you know that...

In Colombia, the market for straws only represents 0.00075% of the total plastic manufactured and consumed.

2,000,000

Tons of plastic per year

150

Tons of plastic per year in straws

How long it takes for garbage to decompose....
