

Cody

HS code classifier Powered by artificial intelligence

Reinventing customs clearance

HS code classification is a bottleneck, causing clearance delays and limited operational capacity, and resulting in high costs. [Meet Cody](#)

Who is Cody?

Cody is an HS code classifier. Cody uses artificial intelligence technology to provide HS codes with 95% accuracy, and can learn and improve over time to maximize accuracy rate. Cody also provides decision-support tools to assist classifiers in making decisions efficiently. Cody minimizes classification errors and scales up on demand.

Cody's work environment

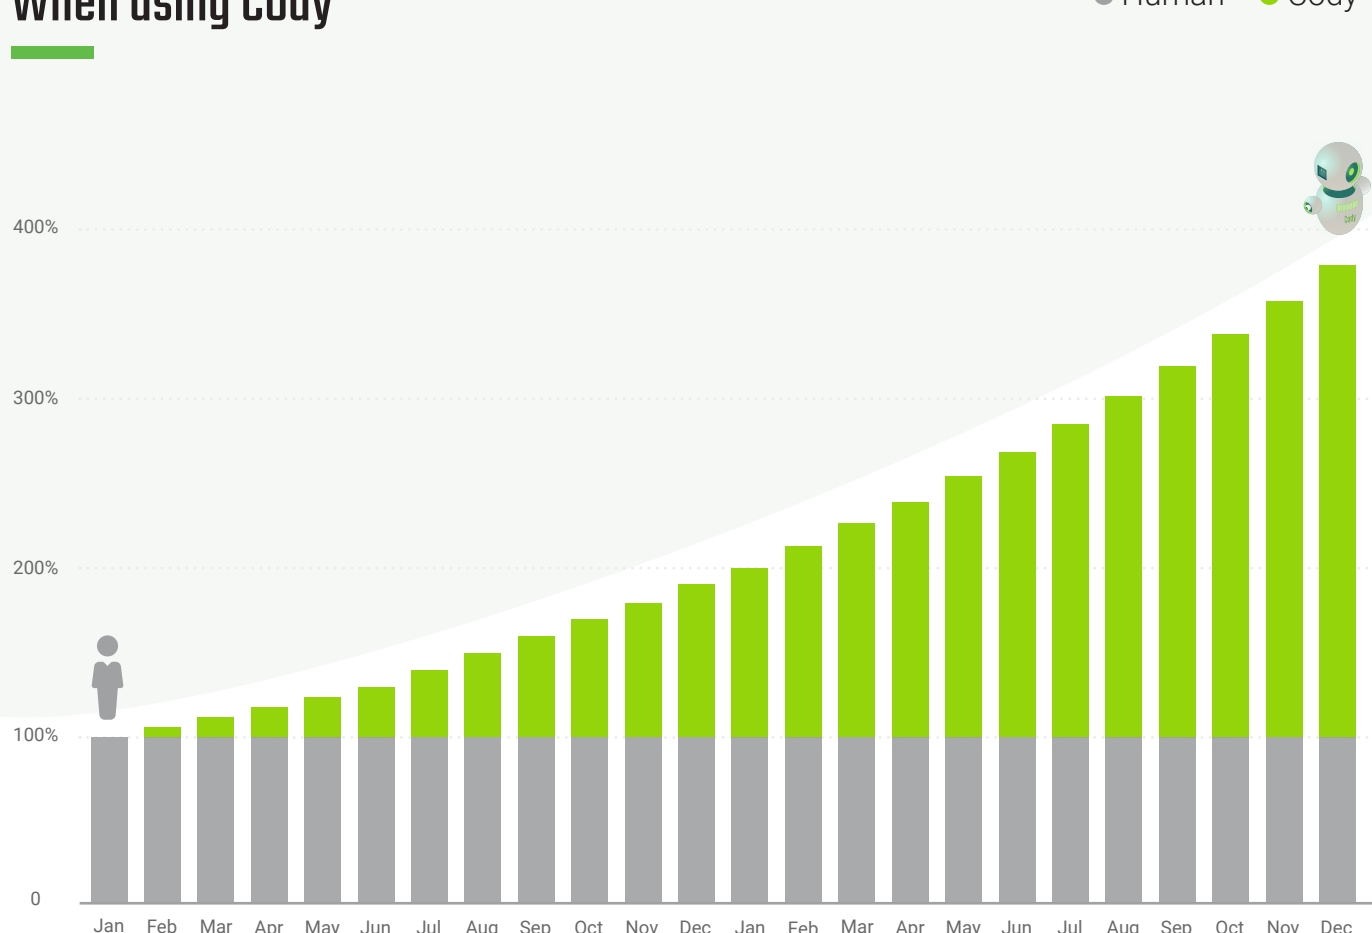

On-site, private cloud or online web, Cody is easily and quickly integrated into any existing infrastructure for a rapid ROI.

Workflow

Cody can be integrated with all common data formats. First, Cody receives your file transmission, which contains a list of shipments with basic shipment data. Then, Cody processes the data and replies with the relevant HS code, along with the relevant data.

When using Cody

**Boosting employee's performance to increase the company's results
and gain market leadership**

Growth without pain

12,000
HS codes per minute

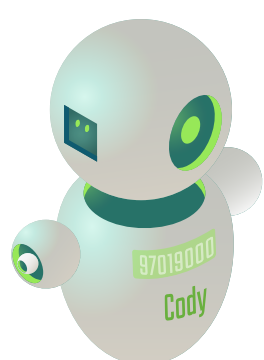

95%
