ADVICE AND COMPUTER AUDIT

The IT audit consists of the review and evaluation of the different tasks carried out by a Technology department, in order to detect all those areas that have problems such as system implementation, fraud in the management of information. , use of computational resources, network designs, databases and infrastructure among others.

OUTSOURCING

Outsourcing is the process in which a specific company moves or allocates resources aimed at fulfilling certain tasks, to an external company, through a contract.

The key to this definition is the transfer of control aspect.

Our Outsourcing services allow clients to efficiently manage processes related to the **maintenance of applications and technological infrastructure, as well as Finance and Human Resources.**

Our goal is to create **alliances with leading companies and organizations**, whose capabilities complement ours; in order to increase and deepen our service offering.

Delivering innovative technology and business processes that help us scale our services to new markets.
