WHAT MAKES US DIFFERENT

MATURE PROCESSES AND EXPERIENCE

(SERVICE EFFICIENCY)

30 years of experience.

CMMI 3 certification
in agile development.

Attention in large-scale
software factory projects
(more than 100 technicians)
for more than 10 years.

SPECIFIC TECHNICAL CAPACITY AND EXPERIENCE

(EFFICIENCY IN USE OF ARCHITECTURE)

A lot of experience, more than
15 years on software architecture,
IBM, Oracle, Red Hat, Red Hat,
OpenShift, and WSO2

More than 27 years of
developing in Java and
more than 16 years in .NET.

High reusability of
pre-manufactured
components

Implementation of cloud-native
solutions and hybrid solutions
with AWS, Azure, or GCP for
more than 7 years.

SUFFICIENT TECHNICAL CAPACITY

(CONTINUITY OF SERVICE)

More than 200 highly experienced
technicians globally.

Average turnover of less than 7%
per year, guaranteeing continuity
of customer services.

An elevated work environment
that attracts and retains the
best talent in Kruger.

Continuous Training
processes.

COMPREHENSIVE VALUE PROPOSITION, UNIFYING DEVELOPMENT AND INNOVATION CAPABILITIES

(EFFICIENCY IN CREATING SOLUTIONS)

In addition to its software factory
services, Kruger has a very robust
Consulting practice that includes
methodologies related to agility
and innovation, such as Design
Thinking, Jobs to be Done, Product
Discovery, etc., which we integrate
into the DevOps cycle, to achieve
true agility to achieve better Time
to Market.

SUCCESSFULL CASES

SOFTWARE FACTORY REFERENCE CASE

CORPORACIÓN FAVORITA

Sector:

Retail

Contract Time:

+15 years

Contracted Amount:

USD *6M/year

Requirement: Automate their business processes to their needs, without considering an ERP and maintain the business operational excellence.

Solution: KRUGER has been providing factory services to Corporación Favorita for 15 years, automating the organization's core and support processes:

- Standardization of business processes and requirements form for factory efficiency.

- Agile DevOps factory process implementation (CI/CD) and SW Support.

- Assignment of an average of 100 annual continuous resources, specialized in Java stack.

Results: Through the projects developed, Corporación Favorita has:

- Remain as the #1 company in Ecuador for more than 10 years.

- Maintain operational efficiency, managing to be the most efficient.

- Achieve zero inventory at their points of sale, by fine tuning reorder and inventory processes.

- More than 250 projects and systems developed over time.

- Continuous modernization of its solutions and software.

SOFTWARE FACTORY REFERENCE CASE

ZURICH

ZURICH®

Sector:

Insurance

Contract Time:

+2 years

Contracted Amount:

USD *1M/year

Requirement: Improve software production through controlled and stable processes, modernizing its solutions and providing greater availability to the operation.

Solution: Optimization of the insurance and billing process, and construction of SW elements for better digital service, which included:

- Stabilization of the issuance and billing core of vehicle insurance.
- Implementation of a commercial management application/module.
- Issuance and billing module replica for several lines.
- Implementation of DevOps processes (CI/CD).

Results: The project was based on the reduction of operating costs, including:

- Reduction of operating, support and payroll costs involved in the closing of monthly policy issuance exercises.
- Elimination of manual tasks with a high workload, through automation that **directly allows users to collect, pay, cancel, and settle policies.**
- Operational load reduction.
- Reduction of errors and re processes.
- Agility in processes.

SOFTWARE FACTORY REFERENCE CASE

PRONACA

Sector:
CPG

Contract Time:
+15 years

Contracted Amount:
USD *0,8M/year

Requirement: Have SW architecture that allows the scalability of the business and avoids frictions between its operational processes.

Solution: The optimization and modernization process of Pronaca's architecture has evolved, including the following milestones:

- Implementation of ESB for the integration of the different ERP's that operate in the business and their migration processes.
- Implementation of a hybrid cloud allowing cloud and on-prem solutions to coexist.
- Implementation of microservices for continuous updating and scalability.

Results: The implemented solutions have allowed the following to Pronaca:

- Reduction of costs and errors in the interoperability of the various systems that support the business operation.
- Cost optimization by promoting the use of cloud and SAAS solutions, and later the use of microservices.
- Continuous operational efficiency, by reducing bureaucratic burdens.
- Optimization of financial flows, by extending the useful life of their systems and support software.

SOFTWARE FACTORY REFERENCE CASE

DIFARE GROUP

Sector:

Retail

Contract Time:

2 years

Contracted Amount:

USD 2M

Requirement: Carry out a process of Digital Transformation in Difare, to assume the growth of the business leveraged in the digital.

Solution: A digital Transformation process was started, which included:

- Government of transformation Project.
- Change management.
- Process Architecture.
- Information Architecture.
- Architecture Transition Technology.

Results: Within the vertical technology of the project the results were:

- Implementation of agile development processes based on DevOps, microservices, and containers,
- Implementation of an interoperability architecture.
- Development and implementation of integration processes between legacy systems and the new Distribution Center solution.
- Architecture Implementation for the transition from legacy systems to new solutions.

SOFTWARE FACTORY REFERENCE CASE

BANCO GUAYAQUIL

Sector:
Financial
Contract Time:
1 year
Contracted Amount:
USD 0,8M

Requirement: Development and implementation of the new service channel for non-financial correspondents (Banco del Barrio).

Solution: Banco del Barrio solution was developed based on a service architecture that included:

- Implementation of service-based architecture, integrating the Bank's various systems to expose the transactional services to be used.
- Implementation of more than 200 services in Banco del Barrio solution, which were later exposed in other bank channels.
- Communications optimization for greater transactional efficiency.

Results: The new platform allowed:

- Deployment in more than 400 points, expanding the coverage of Banco del Barrio.
- Reuse of services in other channels, reducing the response time to the business and with an optimized cost.
- Reduced cost and efficiency of communications between the points and the bank.
- Reduction of the operating cost by being able to use lighter equipment in the terminals.
