

END TO END

ENTERPRISE SOLUTIONS

CYBERSECURITY

Introduction

End to End Enterprise Solutions strives to provide innovative and affordable IT solutions. We take a collaborative approach with our clients to ensure clear understanding of their mission and expectations and customize our solutions to meet their needs. Our team members are credentialed professionals with expertise in IT and cybersecurity.

Capabilities

- CISO Advisory Services
- Cybersecurity Audits/Assessments
- Vulnerability Management
- Penetration Testing
- Incident Response
- SIEM and Event Correlation
- Managed EDR
- Managed Security Services
- Policy Development

Services

CISO Advisory Services

End to End will provide the management expertise to operate a full cybersecurity program to protect your mission critical assets. EEC will provide access to decades of security experience at a fraction of the cost of other firms our size. The potential threat to organizations without the expertise of a CISO, can result in a non-existent or immature cybersecurity program with insufficient policies, lack of governance, and a limited cybersecurity framework – all of which can put your organization at risk.

Cybersecurity Audits/Assessments

End to End will conduct detailed analysis of policies, network vulnerabilities, and physical access to crucial network infrastructure. Comprehensive cybersecurity assessments help to identify opportunities to improve your network against unauthorized monitoring, data breaches, and unauthorized physical access. Assessments cover each point of vulnerability and potential means of access.

Vulnerability Management

End to End will help to enhance your vulnerability analysis and remediation capabilities by utilizing agreed upon methodologies, tools, and resources to mitigate exposure to vulnerabilities. We will collaborate with you to develop and implement a continuous strategy to help improve your ability to identify and mitigate vulnerabilities.

Penetration Testing

End to End performs tests (white, gray, or black) that demonstrate how a skilled attacker would access and compromise PSAPs. Penetration testing allows the ability to determine exactly how attackers would gain unauthorized access using the latest tools and techniques.

PAST PERFORMANCE

Incident Response

End to End provides incident readiness, response services, and related network infrastructure. Incident response readiness ensures that your network is prepared to respond to data breaches and potential security incidents through unauthorized access. Incident response services include recovery and protection of essential data and access points following security incidents.

SIEM and Event Correlation

End to End will collaborate with you to develop an information security continuous monitoring plan and policies, implement tools and sensors around the network to collect event logs to identify known and unknown threats, correlate logs from disparate systems to perform threat hunting and reduce the risk to your operations.

Managed EDR

Using Artificial Intelligence and Machine Learning, End to End will perform threat hunting to detect malicious activity within and across the cyber kill chain to help accelerate investigations and incident resolution. End to End provides real time visibility into your endpoint security postures and 24/7 Security Operations Center (SOC) support.

Managed Security Services

Our managed security service bundle includes:

- CISO Advisory Services
- Vulnerability Management
- Penetration Testing
- Incident Response
- SIEM and Event Correlation
- Manage EDR
- Intrusion Detection System (IDS)
- Intrusion Prevention System (IPS)

Policy Development

End to End will collaborate with you to understand your mission and structure. Then we develop written policies and procedures or identify gaps in your existing policies to ensure compliance with applicable standards.
