

# Asociación de Manejo de Bosques Naturales Esperanza (AMBNE)

# WHO WE ARE

We are an association dedicated to sustainable use of aguajales (BURITI) that are inside of the Pacaya Samiria National Reserve for production of the Buriti Oil; our product has a certification of "allies for the conservation", issued by the National Area Service Natural Protected by the State - SERNANP.

 Founded 20th January, 1997

 Registered in public records on 17th May, 2016 with number : 11081408

 Located in the Native Community Parinari, District of Parinari, Province and Region of Loreto

# 52

## Beneficiary Families

## ALLIES OF THE CONSERVATION

We carry out good practices of use, planning reforestation actions and natural repopulation. We rely on the guidelines of our Management Plan to guarantee the sustainability of the aguajales. (Buriti)

We extract the fruits in the quantity, size and correct zone, according to our contract of harvested.

For this reason, we become allies of the conservation to offer you a product of quality, whose use does not affect the balance with environment and nature.

We have also created a tool by which we call "Super II", that allows us to recollect the Buriti without takedown the palm tree.

## SUPER II, THE AMAZON TOOL ECO-FRIENDLY

Can you imagine having to takedown a 30-meter palm tree high to take advantage of its fruit?

Until a few years ago decades this was the only way to take collected of the buriti.

However, at 1999, Mr. Emilton Flores, one of the founding partners of AMBNE, invented a tool that would revolutionize the way palm trees are used in the community and in the Amazon.

This is the "Super I", an tool whose main material It was the copper wire. It began to be used to take advantage of sustainably the buriti palm tree, but there was a little problem: the base material was very flexible, Little resistant to friction with the trunk.

In the year 2000, three of the partners, observing the limitations of the "Super I", met to identify the aspects that should be improved. then, the copper wire was replaced by sliding metal buckles and belts thin nylon waistband. Also included a seat similar to that of a bicycle and a wooden base to tread with aluminum (to prevent oxidation). These modifications they gave guarantees of safety in use; emerging a new tool, they call "Super II".

The ease of use of the tool meant that, until today, it is used by many people at the regional level, National and international.

# OUR PROCESS

# THE BEST OF THE FOREST

Our offer focuses on the production and sale of Buriti Oil 100% natural. We have the following presentations:

PET Gallon  
From 1L to 5L

PET Bucket  
from 10L to 20L

PET Drum  
of 80L

# BENEFITS OF BURITI OIL

**Antioxidant.** Rich in vitamin A, C and phytoestrogens increase the elasticity of the skin and reduces lines and wrinkles.

**Protects against radiation.** Clarify the dark spots and protects cells from damage from sun radiation. Also, decreases skin dryness damaged.

**Repair damaged hair.** Strengthens and softens hair dry and battered, helping to repair it.

*Esperanza para los bosques amazónicos.*
