

Olvido® is a solution designed to securely overwrite and erase files and disks.

Features

Securely erases multiple types of data, including:

FILES AND FOLDERS

FREE DISK SPACE

UNUSED CLUSTER FRAGMENTS

DISKS

MEMORY PAGING VOLUMES

DUMP FILES

Compliance with Erasure Standards

Olvido® incorporates a built-in editor and a wide range of predefined erasure algorithms, including those specifically designed for ENS compliance and the secure erasure of Classified Information.

Regulatory Compliance

Olvido® helps meet regulatory requirements, including Spain's National Security Framework (ENS)—a set of cybersecurity standards for public sector, critical infrastructure, and classified systems. These controls, such as [mp.si.5] Deletion and Destruction and [op.pl.5] Certified Products, are comparable to international security standards used in other countries.

Includes

A scheduler for automatic erasure tasks and can be integrated with SIEM systems.

CPSTIC Inclusion

Olvido® is listed in Spain's official cybersecurity catalogue (**CPSTIC**), managed by the National Cryptologic Center (CCN). This registry features products that have passed rigorous evaluation and certification, qualifying them for use under ENS and in classified environments—similar to validation lists and certifications found worldwide.
