

QUALITY AND SAFETY
EVERY DAY

WWW.ESEL.COM.BR

Based on the concept of sustainability, ESEL works so that market needs are met and natural resources are preserved for future generations.

It is due to the commercial partnerships with reliable suppliers, that the wood derives from logging companies where there is a sustainable management of forests, ensuring this resource for the future.

In addition, since 2006 it is used eucalyptus in the manufacture of products and, since 2008 it is invested in reforestation of this species from Australia.

Still, there is the wood recycling process, where small parts are spliced so that larger pieces are formed, thus avoiding wastage.

ESEL produces doors and windows with Eucalyptus wood, Angelim (*Hymenolobium Petraeum*), Cedro Mara (*Cedrelinga Catenaeformis*) and mixed wood. The wood drying process is by exposing it to the air for better adaptation to the climate, resulting in a product with higher quality. It is worth noting that this drying process may reach a period of more than two years.

WINDOWS AND AWNING WINDOWS
