

**angular
solutions**

**Quality and operational support
where your plant needs it**

Inspection • Sorting • Containment • Rework • Operational Staffing

**FLEXIBLE RESPONSE FOR AUTOMOTIVE
AND MANUFACTURING**

We are not just inspection; we are shop-floor response

We step in exactly where the customer needs to control risk, release material or strengthen the operation.

01

Every type of component

From the smallest screw to critical, visible, functional or high-value components.

02

Every type of process

Powertrain, stamping, body shop, paint shop, trim, final assembly, testing, yards and shipping

03

Every type of scenario

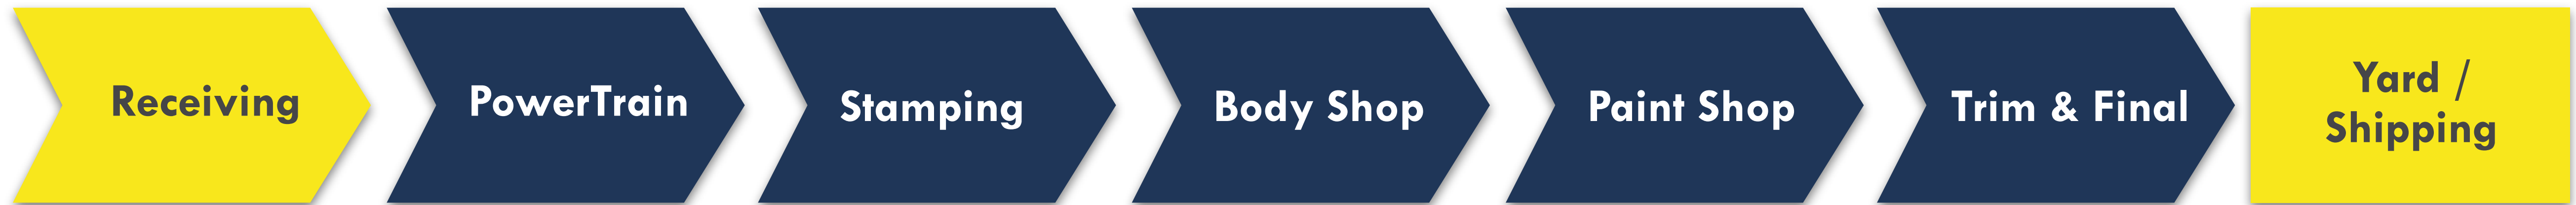

Line, receiving, warehouse, containment area, lab, supplier, customer or logistics chain.

Angular Solutions adapts to the quality or operational issue wherever it happens.

Presence across the automotive flow

From material receiving to final release: we support campaigns, projects or recurring operations.

In-process quality

Inspection, sorting, rework, containment and controlled release.

Internal logistics

Inventories, warehouses, material handling, line feeding and packaging.

Flexible workforce

Supervised teams for peaks, campaigns or temporary needs.

Quality: our core business

Inspection, sorting and containment with a practical, reportable, on-site approach.

1

100% inspection

Visual, functional or specific-criteria validation.

2

Sorting and selection

Separation of conforming and nonconforming product.

3

Quality campaigns

Rapid response to defects, alerts or containment needs.

4

Rework

Deburring, drilling, polishing, cleaning or re-inspection.

5

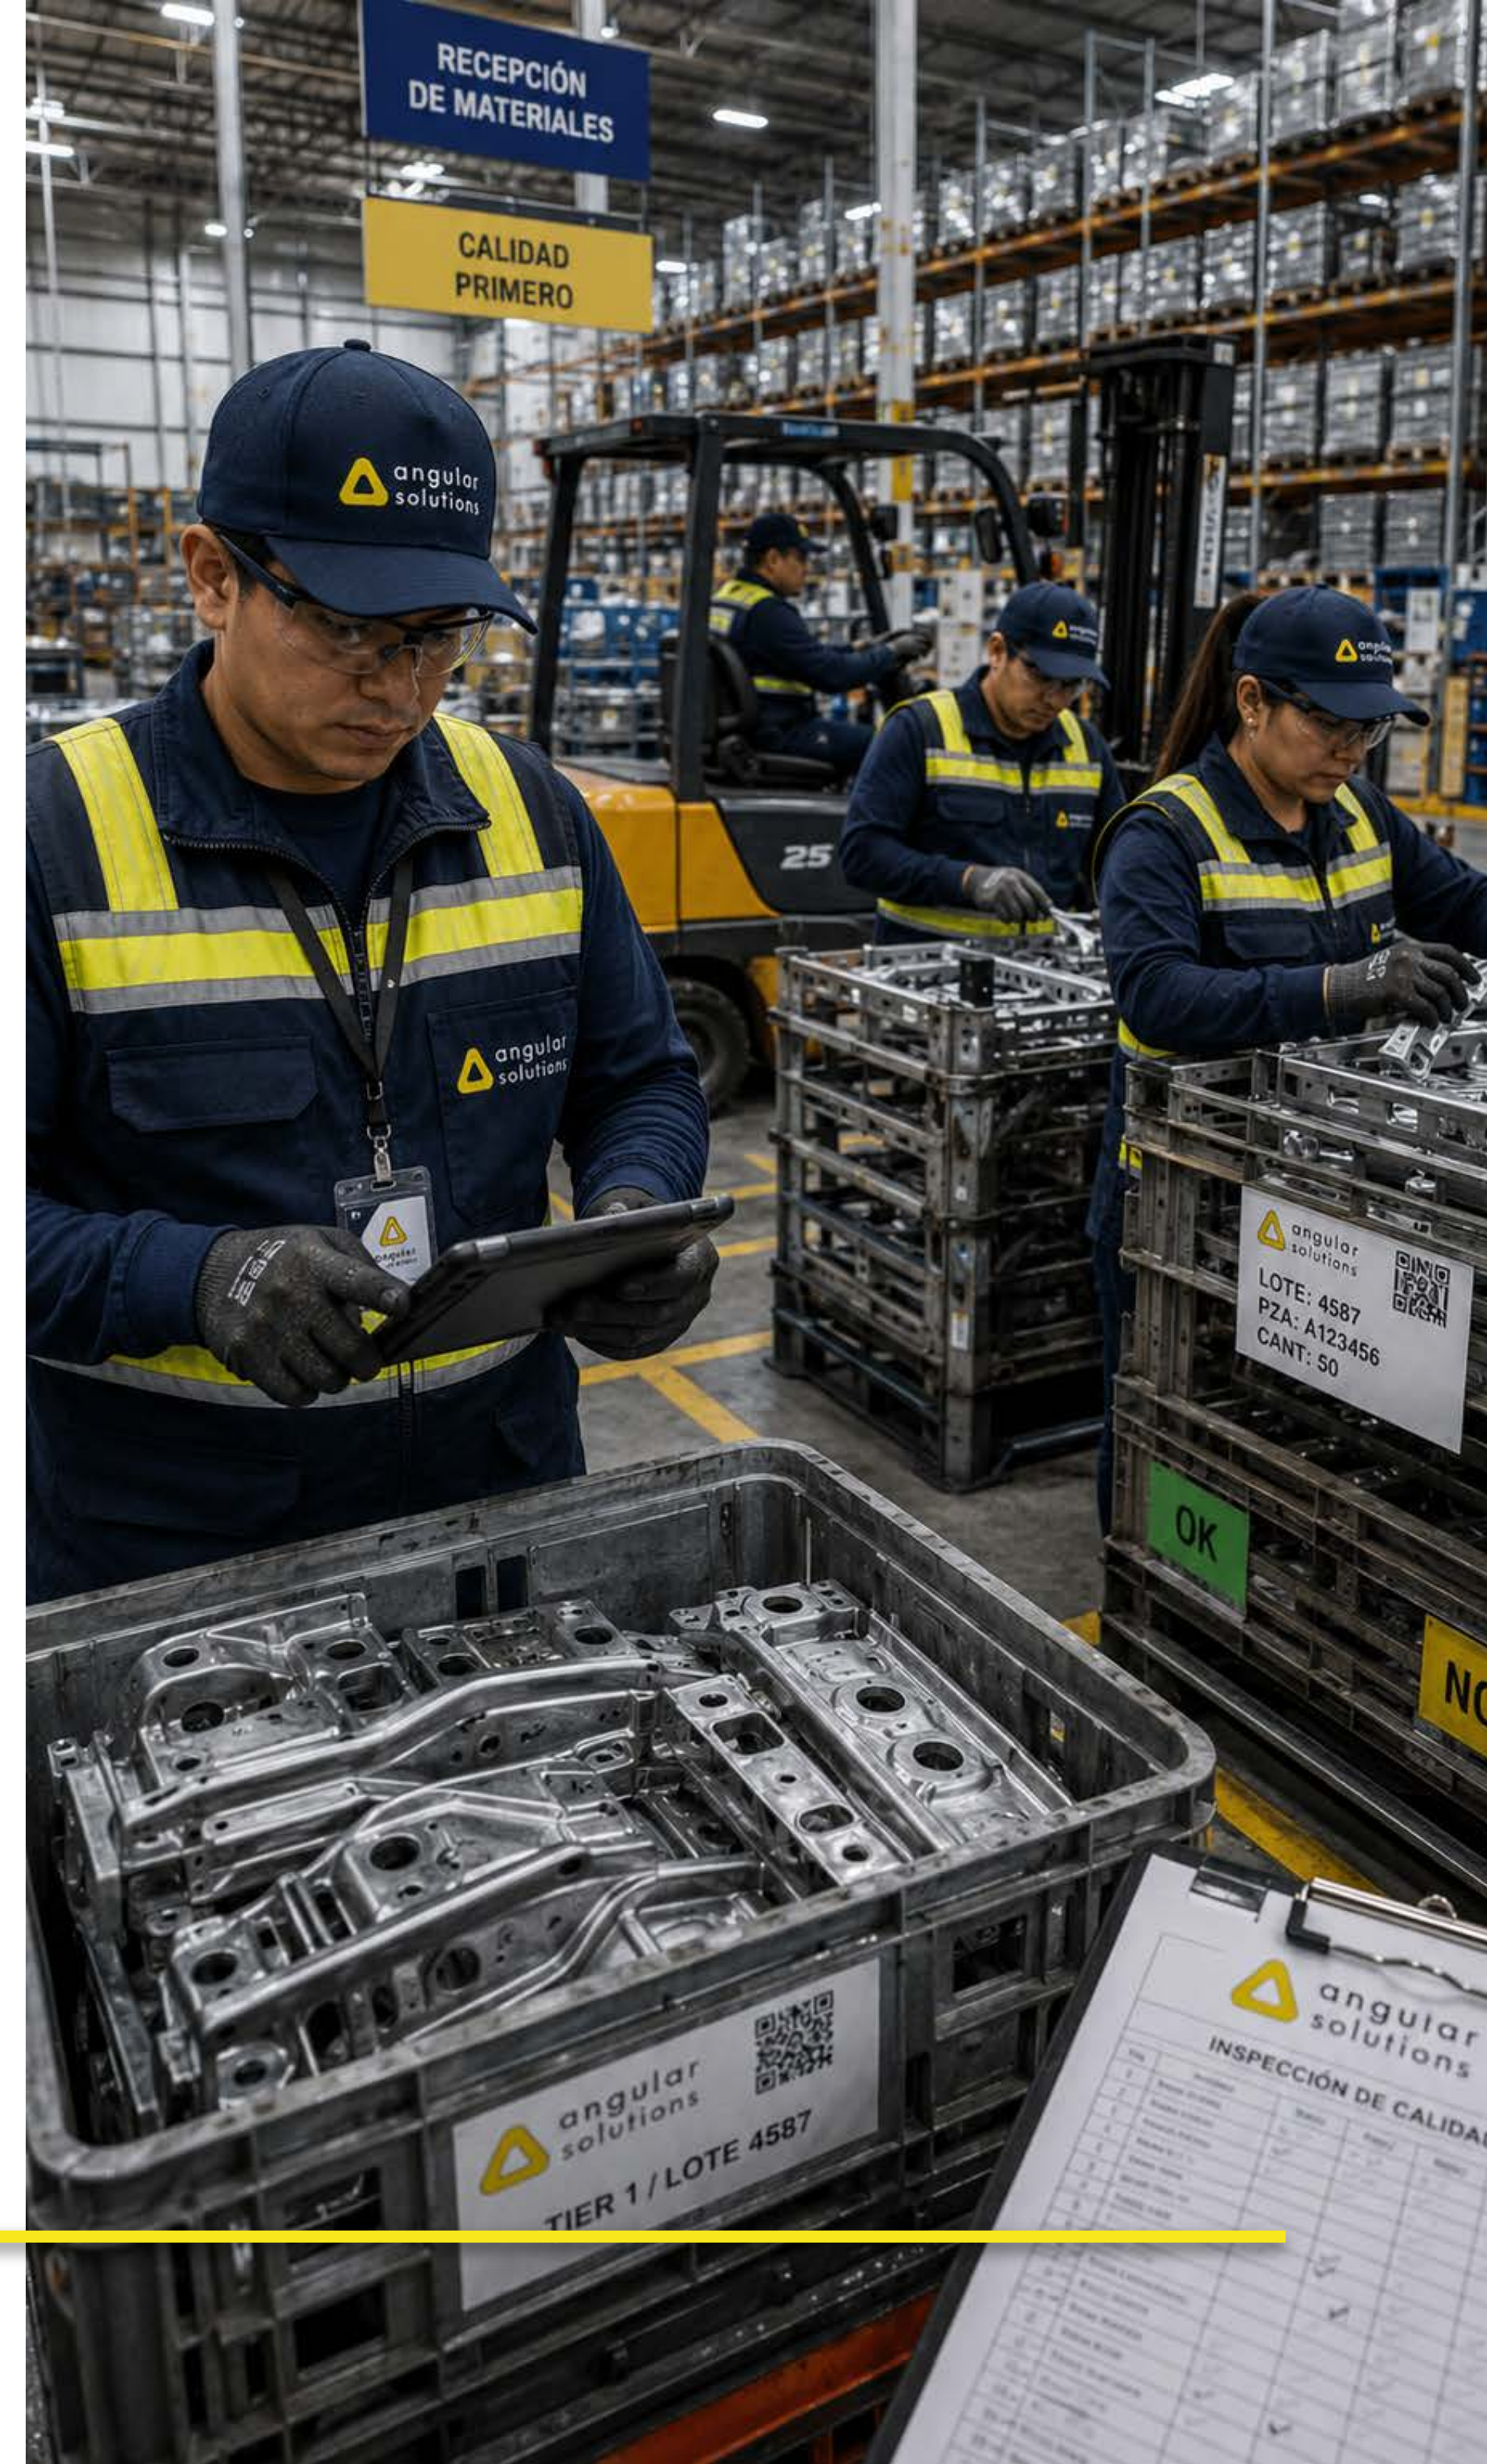

Quality residents

On-site inspector, technician or engineer.

6

Assembly / subassembly

Operational support with defined controls.

Beyond quality: operational support

Customers see us as their right hand for reliable, supervised staffing.

“Your operational right hand on-site.”

One partner to solve quality, logistics and operational needs without distracting your internal team.

Inventories

Physical counts, cycle counts and material validations.

Forklift operators

Operational staff for safe material handling.

Warehouses

Management, support, organization and control.

Internal logistics

Transfers, line feeding and container returns.

Packaging

Box assembly, strapping, repacking and labeling.

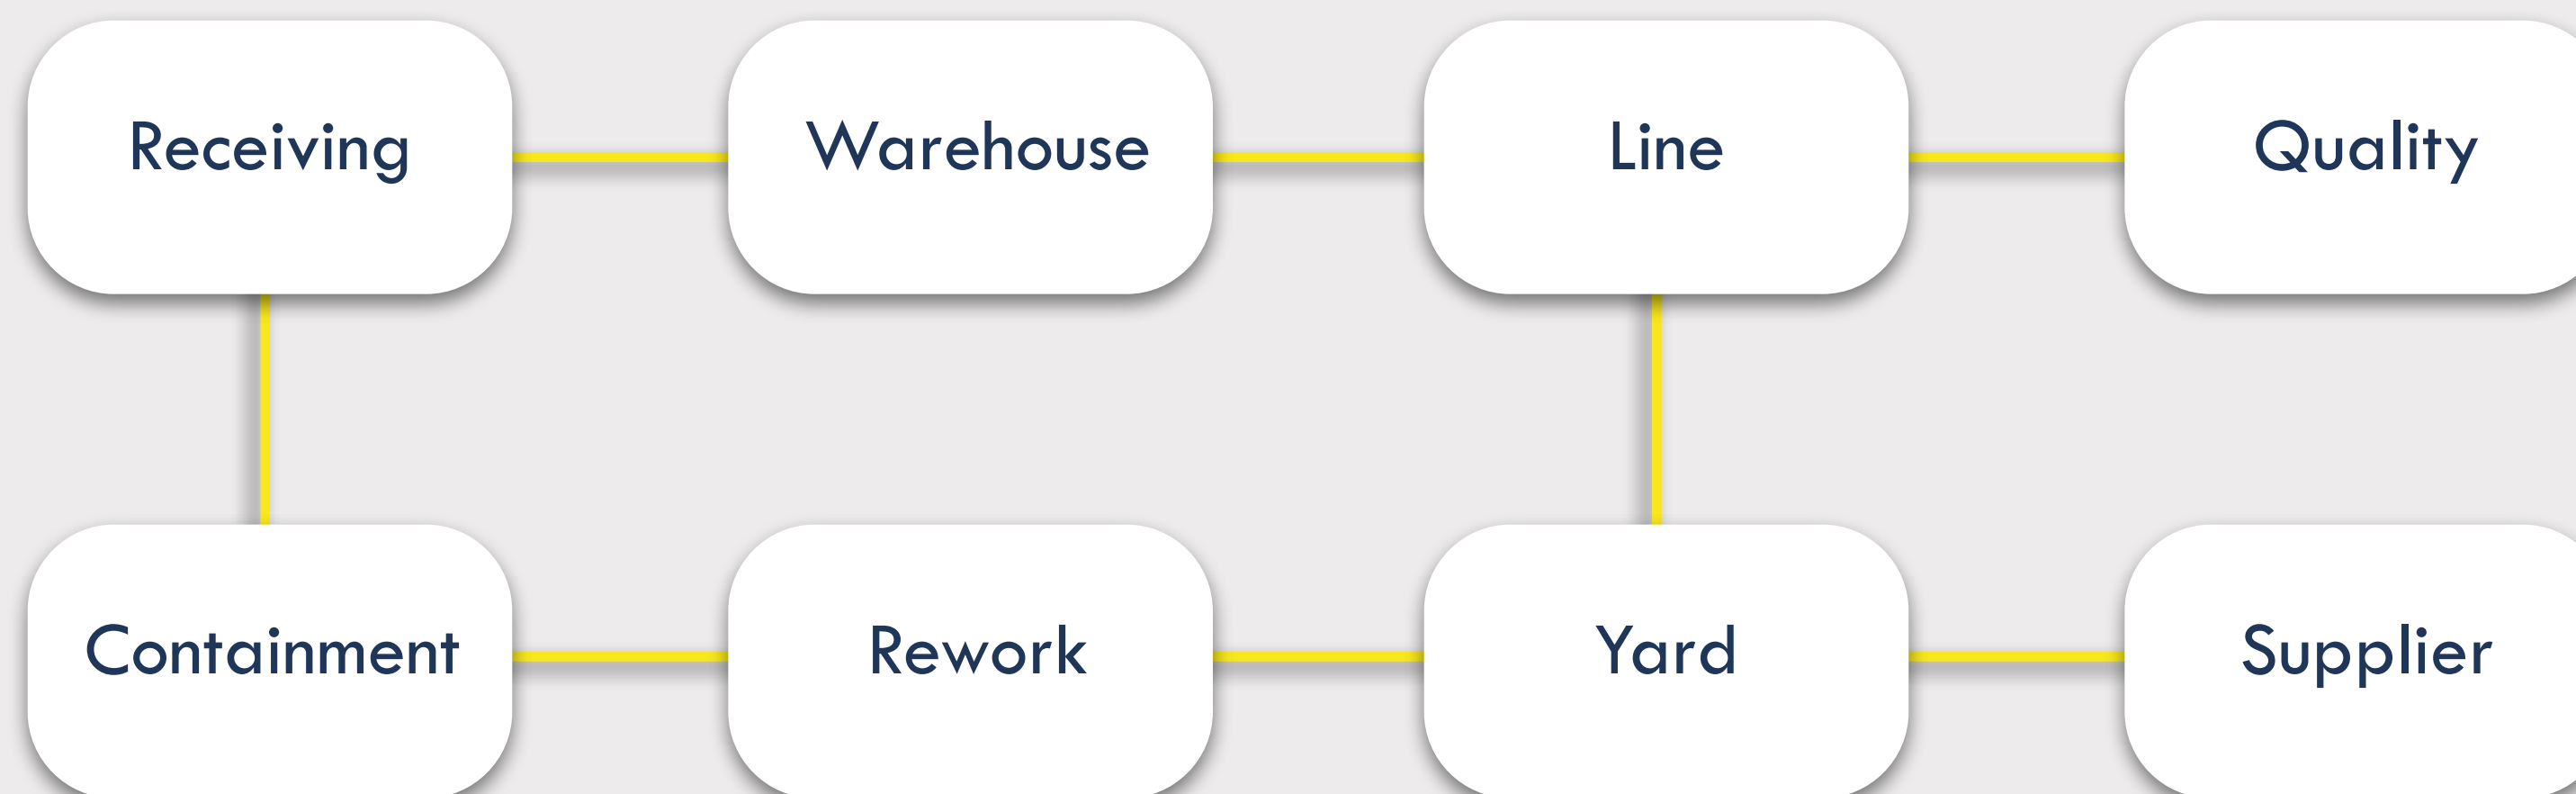

Operational cleaning

Support in production areas and special projects.

Where we can step in

The work location does not limit the service: we go where the material, risk or need is.

OPERATING MAP

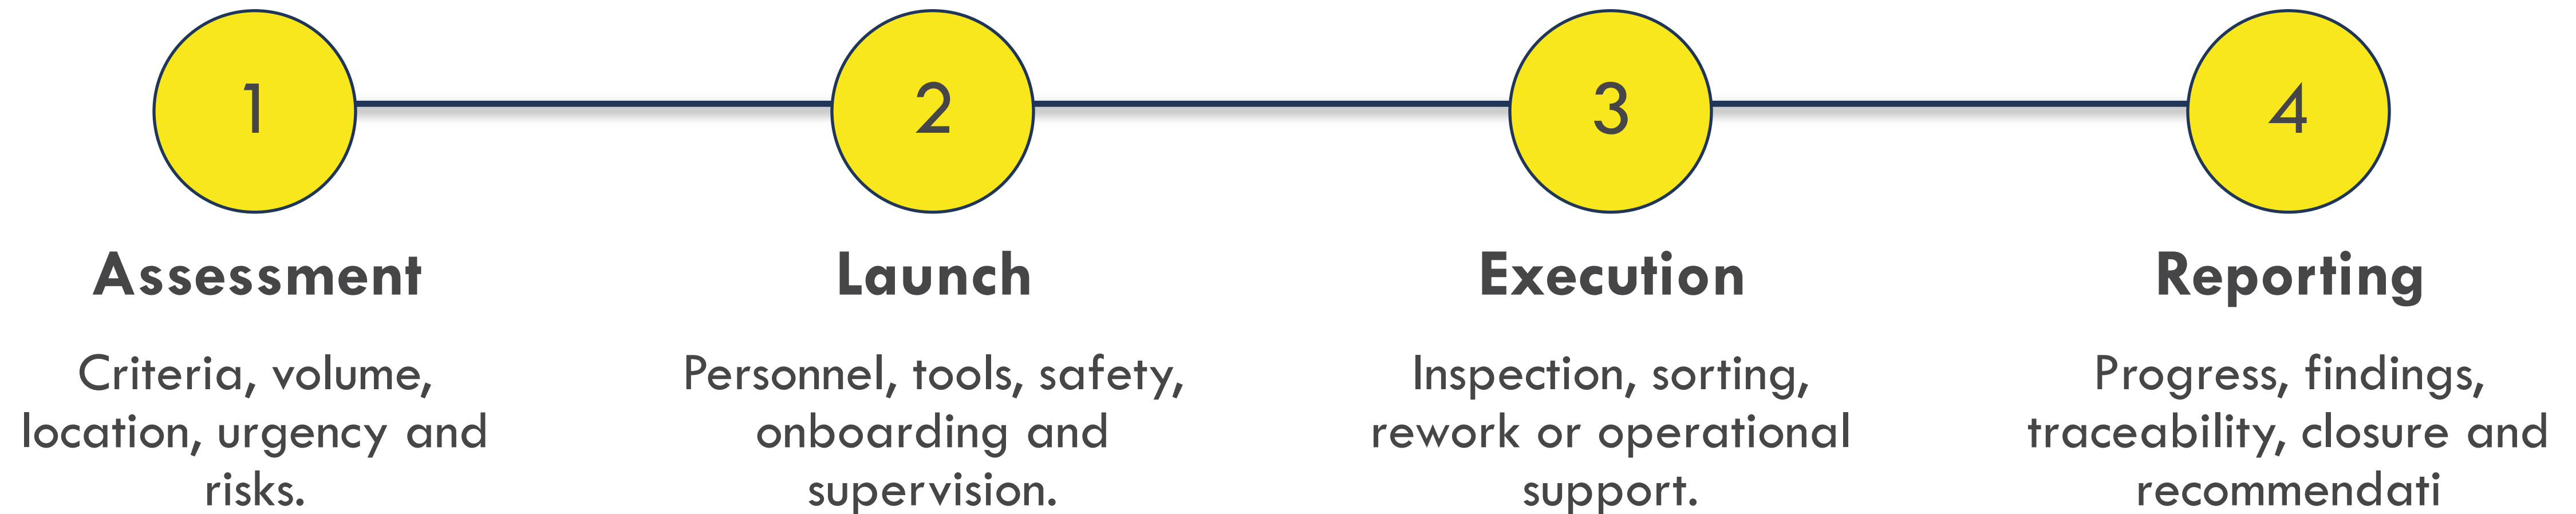

Intervention examples

- Material receiving and release
- Warehouses, racks and sequencing
- Production line / stations
- Quarantine or containment areas
- Yard, shipping or port
- Supplier or customer facilities

How we operate

A simple structure to start fast, control execution and deliver clear evidence.

Flexible model: by hour, shift, campaign, project or recurring support — with supervision and progress evidence.

What your plant gains

Response, control and confidence from one provider.

Lower quality risk

Containment and validation before the issue moves forward.

Faster release

Teams focused on unblocking material and operational flow.

Less administrative burden

Supervised personnel and integrated coordination.

True flexibility

We scale up or down according to customer needs.

Let's talk about your on-site need.

From an urgent campaign to a full operational project, we can structure a tailored solution.
