Software Development

By using Agile methodologies, we deliver software accompanying all the stages of development.

A regional Call Center needed to automatize their bonus calculation for 8,000+ employees located in Mexico, Colombia, Costa Rica and El Salvador. Teaming up with the company we analyzed and created a solution integrating variables such as country, client, bonus classification and others. The company reduced its processing time, complied with auditing requirements and accelerated its calculation process.

Product Creation

We advice entrepreneurs and startups, and help them in bringing their software ideas and expectations into reality

The owner of a mechanical shop saw the opportunity for creating a tool for controlling its operations and selling the solution to other colleagues. Based on its practice, we are creating a generic solution that will be sold regionally starting 2019.

The entrepreneur will obtain benefits by improving its current operations and will obtain incremental revenues from this new product.

Education

This allows us to build long-lasting alliances and keep an exclusive club of IT professionals

We develop skills and create innovation leaders available for future products through alliances. So far, 3 companies in the US and 1 in Germany have received interns that besides of acquiring technical knowledge, have learned the inner practices of the companies. This, and our local expertise, give us the technical and commercial skills to partner with our allies as their gateway for Latin America.

BPO

We help clients to efficiently streamline their operation by relying in our software and processes

After receiving some of our personnel as interns, this ally decided to hire us to develop software from El Salvador for customers in the US and Europe. We are in the fifth year of this agreement and keep working to continuously improve the operation. The outcome is a win-win scenario: a cost advantage for the ally, good salaries for our collaborators and an ongoing revenue for Korinver.
