Brief History

Mandiri Coffee was born from the basic human desire for independence and self-sufficiency, specifically in coffee production. With experience working in the coffee industry, Cipta Kurnia, the owner, confidently set out to elevate Mandiri Coffee to the highest levels of coffee production, starting from a simple garage.

From the outset, Mandiri Coffee focused on raw and roasted coffee beans, emphasizing coffee production downstream. Thanks to this focus, Mandiri Coffee achieved its largest production in 2023, totaling 1037 tons, successfully exported to various developed countries such as the United States, France, Italy, South Korea, and several other Western European countries.

In addition to coffee production, social relations are also a priority, with 80% of the workforce being women. Through high standards and hard work, Mandiri Coffee achieves a sustainable production output of up to 19.2 tons per month with consistent product quality.
