

Methamphetamine

Methamphetamine is a stimulant drug which comes in 3 different groups which includes

- Base (Damp/oily unrefined Methamphetamine with a purity level of 21% usually swallowed)**

- Speed (Powder Methamphetamine "speed" is less pure as compared to the Base 10% purity usually snorted or injected)**

- Ice (Crystalline Methamphetamine "Ice" or "Crystal Meth" with a purity of 80% and above usually smoked or injected)

- There is also dexamphetamine which doctors prescribe for the treatment of attention deficit hyperactivity disorder (ADHD) and narcolepsy (a sleep disorder)

It is worthy to note that Ice is always use in combination with

other drugs

[Buying Crystal Methamphetamine online](#) makes the brain to produce a very strong neurotransmitters especially Dopamine and Noradrenalin. These substance are responsible for attention, behavior, Brain functioning and make the blood flow in the brain accelerates making the consumer to become full of energy, positivity, the tiredness goes away, the hunger goes away as well making the individual to be able to function at a much higher level. The problems is the repeated use with time make the

**brain gets depleted of dopamine
and noradrenalin.**

**[Buy Crystal Methamphetamine
Online](#) has a different reaction
time in the body which is related
to the mode of consumption. A
person who takes it by putting it in
a drink will take longer to get the
feelings compare to someone who
snorted it because it's almost
instantaneous in reaction when
snorted or injected.**

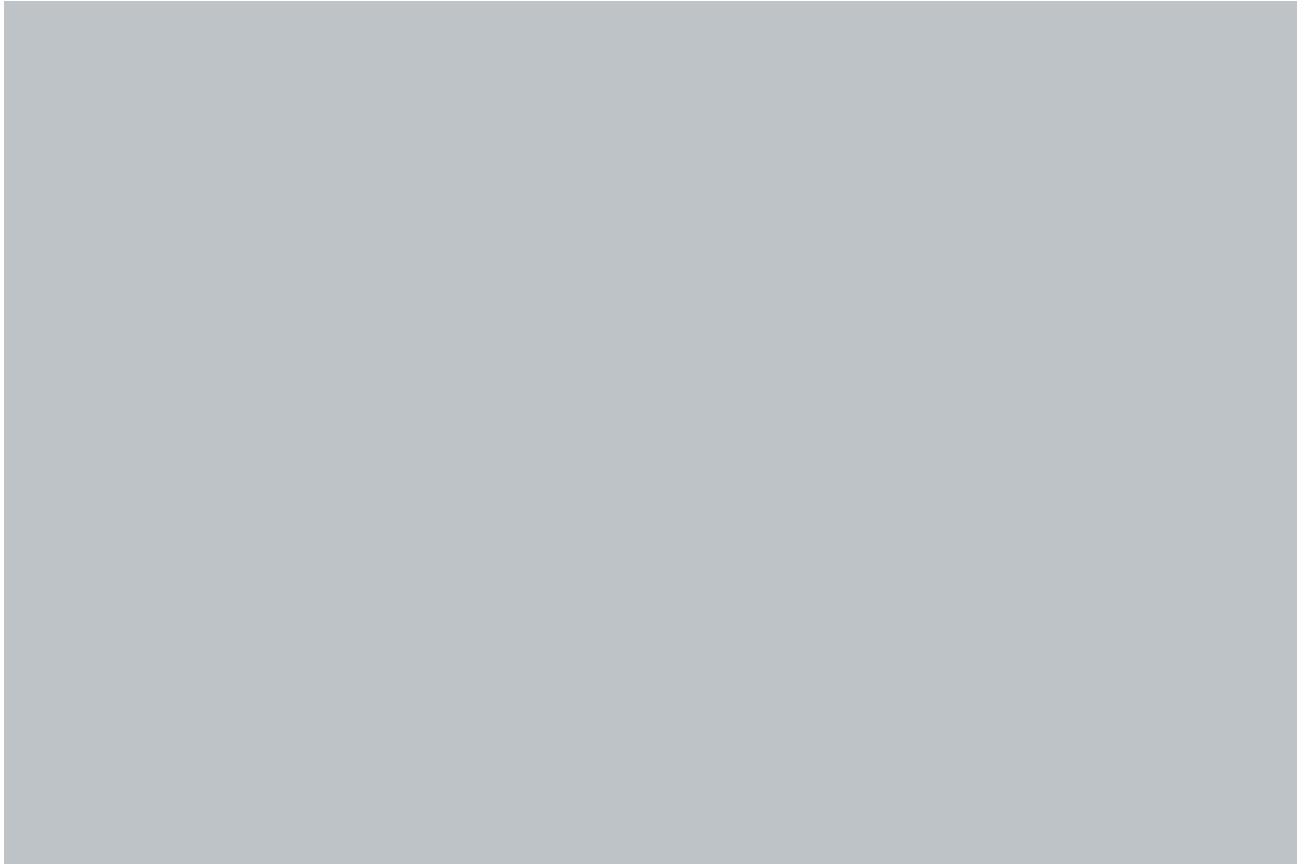

History

**Methamphetamine was developed
in 1919, at one stage it was used in**

medicine in the field of psychiatric
similar to the other
Hallucinogenic drugs which were
use in psychiatric to make people
talk and was used as an anti
depressant at some stage.

Definitely used in wars to keep
pilots awake with reference being
the second world war, it was also
used in the Vietnam war. American
Soldiers used it along with Heroin
which was much more common
compare to [Methamphetamine](#)
[For Sale](#) at the time and it's
rumored that Methamphetamine
was supplied to the pilots and
soldiers as well. The problematic
use only started in the 60s and

**70s and then it was controlled and
illegalized. In 2000 we started
seeing ice around more common
and now it a scourge.**

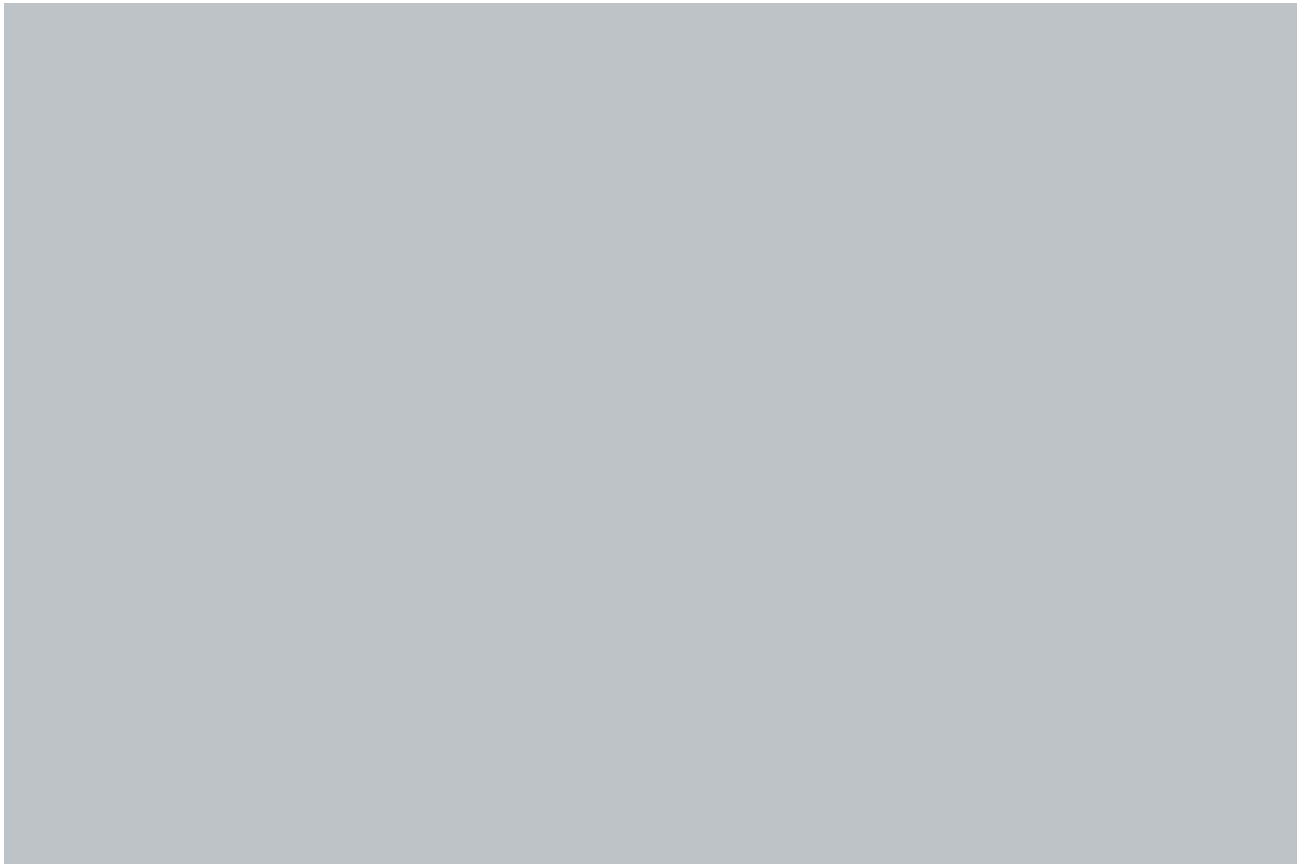

**Looking at the 2013 national drug
household survey
Methamphetamine comes as the
5th most consume drug which is**

**increasing rapidly annually.
Research in the US, it's shows that
1 in every 15 Americans have once
used or is using
Methamphetamine.**

**Many people have moved from
the regular BASE and SPEED form
to ICE reason being that "ICE" has
a higher purity which equally
implies that the later is much
more potent than the forma and
the price has dropped.**

**It should be worth noting that
people who consume ICE
(Methamphetamine) do so most at
times with other drugs especially**

Alcohol. According to statistics, it shows that only 30% of ICE user are regular users that's to say the consume it regularly like on daily basis, 10% to 15% uses it weekly why 70% of the consumers do so occasionally.

According to a research carried out in the US, it's stipulates that [Methamphetamine](#) is not as addictive as tobacco and alcohol. It says Ice is similar to cannabis with a statistic of only 1 out of 10 persons get's addicted why using ICE, Tobacco is 1 out of 3, and it show 1 in 5 for Heroin, lastly 1 in 8 for Alcohol.

Ice use has doubled in the previous 3 years from 22% to 55% and the recent use of speed has drop to half. The heaviest users of [Order Methamphetamine Online](#) falls within the age group of 20 to 29, twice as commonly used by

people who use another drug. Unemployed people and those who habitat in Rural areas are perceived to be using [methamphetamines For Sale](#) more due to the loose security nature in rural areas as compared to big cities not forgetting the fact that people in big Cities prefer Cocaine which is stronger than ICE and more expensive because they can afford it. It is also of high use among the gay community.

Ice is commonly referred to as a party drug in the likes of Heroin, ecstasy to name a few, which intern make people get involve in

risky behaviors like the sharing of injectable objects and unprotected sex which has made researchers to link the drug to a means of getting infected to blood transmitted diseases with HIV being monitored as the main fear factor because of the killer nature to human race.
