KNOW EVERYTHING ABOUT YOUR NETWORK

DISCOVERY AND NETWORK MAPPING

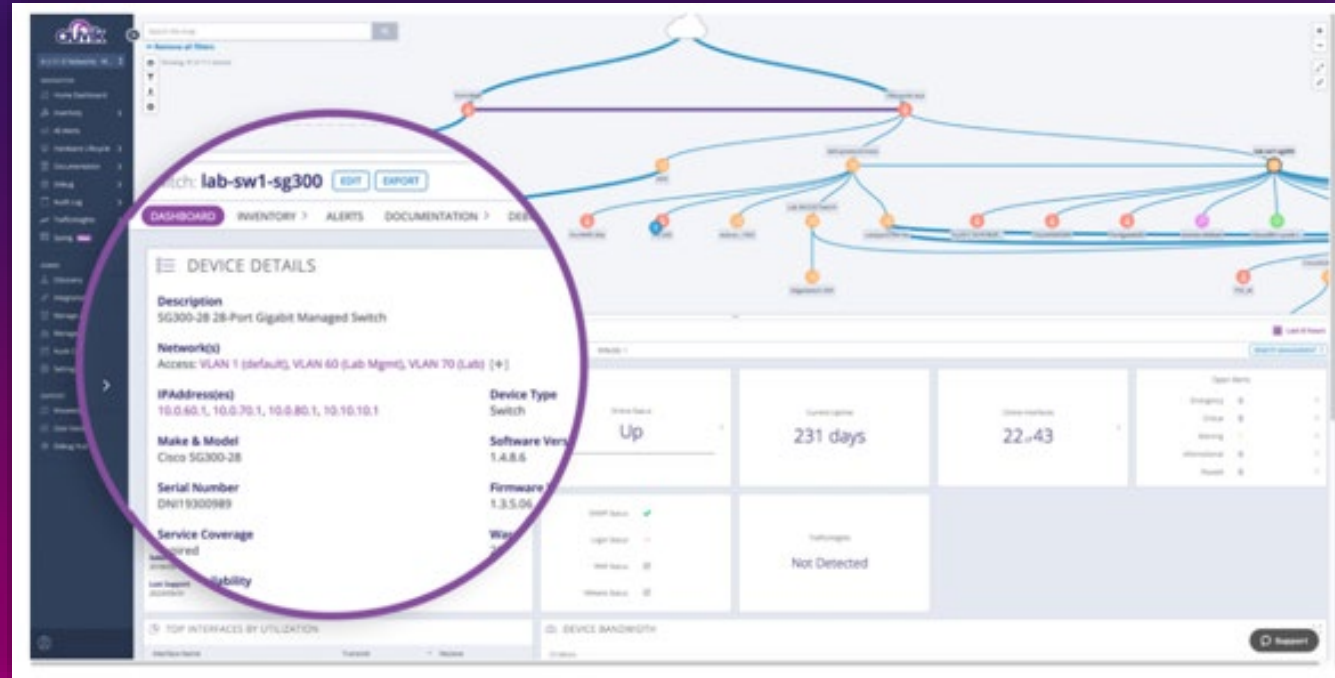

KNOW EXACTLY WHAT IS ON THE NETWORK AND HOW IT'S ALL CONNECTED IN REAL-TIME

Omniscient pulls data from sources like CDP, LLDP, and forward tables to meticulously model the Layer 1 network diagram. Layers 2 and 3 are built from ARP tables, IP assignments and VLAN associations

INVENTORY AND DOCUMENTATION

GET FULL DETAILS OF EVERY DEVICE ON THE NETWORK

Omniscient's automated inventory users network protocols to detect and capture full details for every device on the network, including make and model, serial number, IP address, and the physical switch port the device is connected to.

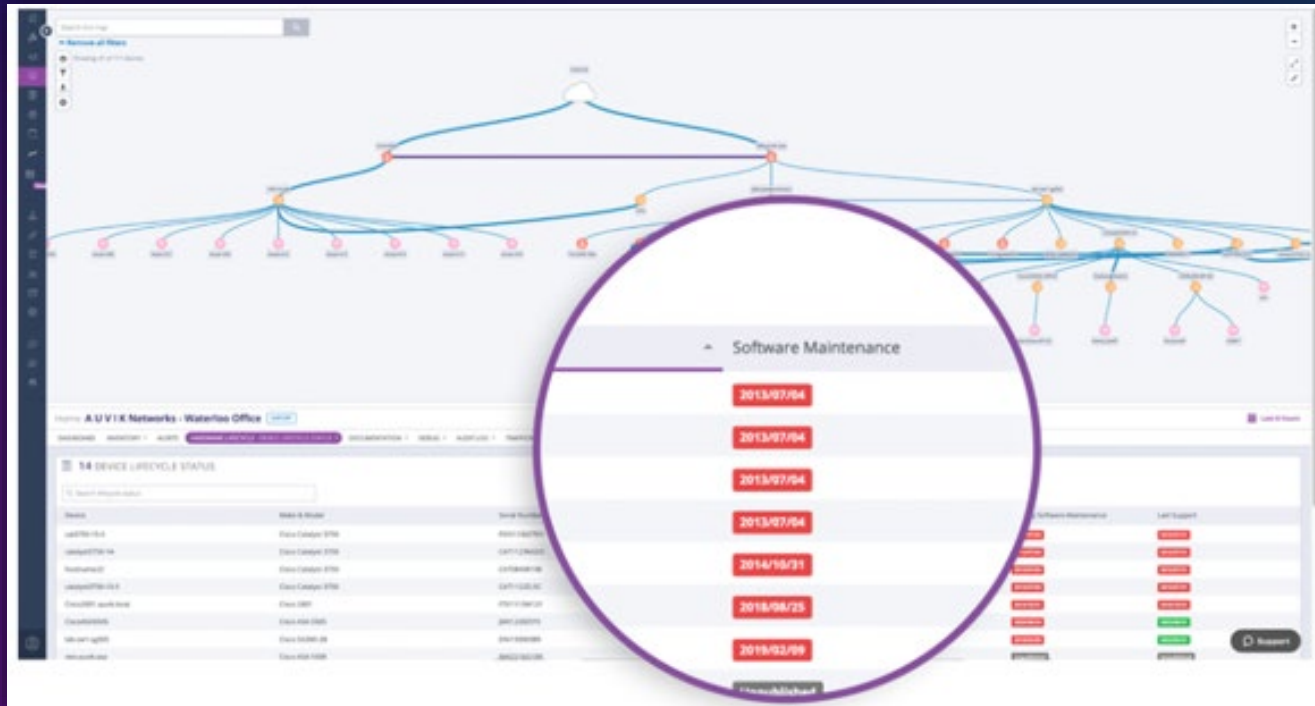

HARDWARE LIFECYCLE DATA

**EASILY IDENTIFY DEVICES
THAT NEED TO BE
UPGRADED OR REPLACED**

Omniscient MNMS pulls lifecycle data from supported devices to show if they are on current or expired support contracts, where there are more up-to-date software versions available or need critical security updates.
