

For more than 15 years our core business has been in the agricultural area, providing organic and friendly alternatives to the environment. At the same time, we have helped improved the profitability and sanitation of the farmer's plantations.

The technology implemented in the field has allowed us to increase substantially the precursor molecules of organic compounds; that provides a greater flavor, color and aroma to fruits and vegetables.

OVAL FOODS produces raw material for the food industry; the same ones that allow to improve the quality of the final products; in this way, better results in the production process can be obtained.
