

WE HAVE THE BEST FACILITIES,
TECHNOLOGY, SPECIALIZED TEAM
AND COMMUNICATION SYSTEM

ABOUT US

We are a mexican firm with 10 years of expierence providing risk analysis consulting services.

Our main strength lies on our professional multidisciplinary staff, that allows us to provide highly qualified work groups. In order to create innovating and efficient solutions, our team has participated prominently in specialized projects in both, national and international institutions.

The complexity of our services requires us to have a solid infrastructure regarding facilities, technology, specialized equipment and communication systems for customer service on site or remotely. In addition to our services, we have the financial support required to execute our operations and provide a great service.

OUR MISSION

To create, innovate, apply, modify and improve risk analysis solutions with a comprhensive approach, on time and form to satify our clients needs and make this useful knowledge available to society for it's easy management.

OUR VALUES

We have focused our objectives and goals to our client's satisfaction, conducted by an ethic code based on honesty, teamwork, professionalism, innovation and efficency.

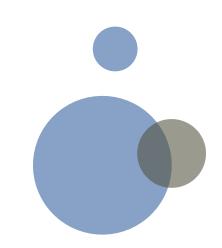

OUR VISION

Being the leading Consulting Firm in Risk Management in Latin America. Stand out with excellence and profesionalism due to our products and services, consolidating a great position in our industry as the best alternative regarding our efficency innovation and reliability.

OUR SOLUTIONS

RISK STUDIES

We develop risk studies based on the construction of local and federal assets inventories containing risk associated variables, hazard identification and risk quantification mainly oriented to the design of risk transfer products.

INSURANCE

We offer assistance on the several stages involved on the insurance process such as: risk inspection, underwriting, premium and reserves calculus, loss adjustment, indemnities recovery in order to fulfill your needs.

IT SOLUTIONS

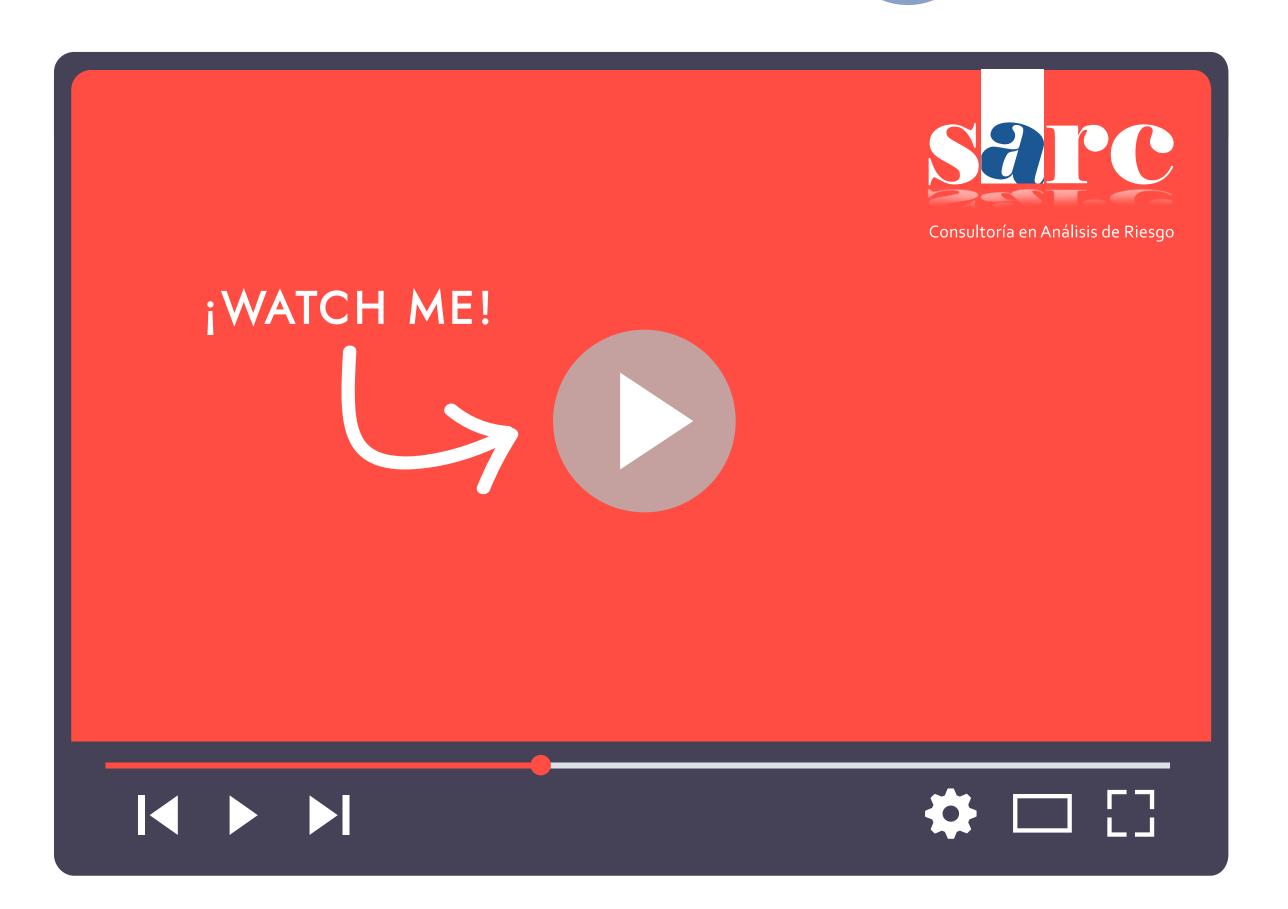

We develop customized solutions using cutting-edge technology to generate or transform data into meaningful and valuable results, in order to create competitive advantages for your business.

INTERACTIVE MAPPING & GIS

We develop GIS technology applications powered by drones or satellite images, integrating spatial analysis and modeling in order to simplify risk assessment.

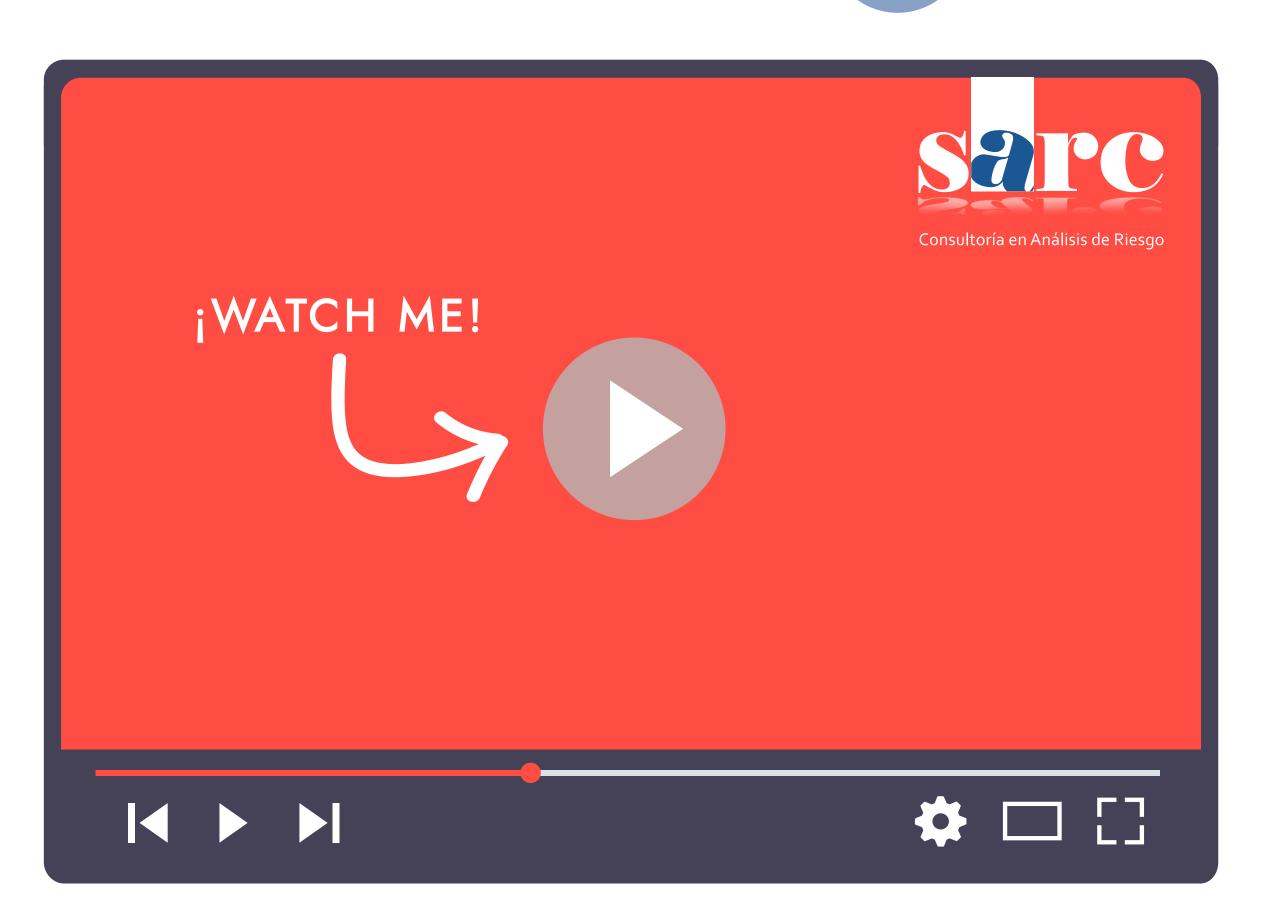

Since our creation, we have developed Risk Management Strategy Studies for Subnational Economies (EGIR for its acronym in Spanish) for 6 states in the country, currently leading the Mexican market. These studies allowed us to generate experience in the construction of state and federal assets inventories with risk associated variables, identification and quantification of risks and definition of insurance products according to the needs of each client. Our experience acquired by these risk studies has allowed us to expand our products towards the development of Risk Atlas and other vulnerability studies such as Oaxaca's housing sector.

Our risk studies have been well accepted by the international reinsurer market, and have served as basis for elaboration of joint insurance products led by the Federation, so we can affirm we actively participate in the creation of Catastrophic Risk Insurance Pool for Mexican States.

We jointly analyze with the States the costs, conditions and terms of the insurance proposals they receive, and once the disaster occurs we advise them about losses recovery and damage evaluation related activities.

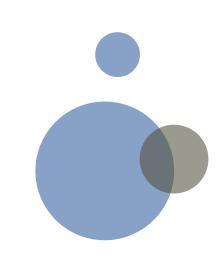

UNDERSTANDING RISK Central America 2020

On February 2020 we had the opportunity to share our expirience inside Understanding Risk Central America forum, organized by World Bank, wich aimed to build aliances between several main representatives of the most vulnerable region in the world. This conferences focused on showing best practices and innovation regarding risk awareness, our main objective was: I) Share our risk awareness methodology development during the plenary session, II) Display SIRED performance on a MiniLab, a tool that allows to gather information and helps to evaluate disaster damages.

Our informatic developments, such as GIR-O platform, have been rated as innovative by multilateral organizations such as the United Nations Program for Disaster Reduction (UNDP) with whom we have worked closely in the development of tools to improve reduction of disasters in Oaxaca.

We created and improved the FONDEN Online System, a geographical platform that automates access, authorization and monitoring of resources granted by the Natural Disaster Fund for damaged infrastructure reconstruction. Latest update includes an app for damage evaluation of affected areas from any mobile device.

We use cutting-edge technology in our projects, such as unmanned aerial vehicles (drones) for agricultural land inspection and health crops determination according to each phenological stage.

Integral Risk Management Strategies
for Sub-national Economies: The case of Oaxaca

FONDEN Online

Drone Flights

We perform drone flights for great magnitude damage evaluation events, such as September 7 2017 earthquake, in which we obtain a first dimension of damages by traveling to the areas of greatest impact in Oaxaca.

Oaxaca September 2017

As our international experience, our consultants have developed international projects with World Bank in countries such as Bolivia, where a Risk Management Policy was created. Recently, we develop a Data Collection and Damage Evaluation System for Dominican Republic named "SIRED-RD" which is a multiuser platform that enables data collection and damage evaluation activities through the use of mobile devices. The system is currently being replicated for Guatemala, Honduras and Panama.

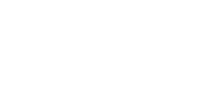

Damage collection and Evaluation System for the Dominican Republic

Transfering information related, we're actively participating on several forums, such as 2017 Disaster Risk Reduction Global Platform, organized by United Nations.

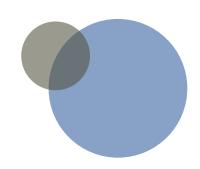

Disaster Risk Reduction Global Platform
