

**InnoBus Counting** will ease the data collection of your fleet's mobility; it will keep you informed about the effectiveness of your routes and the daily income from each of your vehicles.

It will prevent alterations of the passenger counting thanks to a set of tools by which you will be able to identify and correct bad manners that affect the performance of your operation.

## 1

### Reports are now in **real time**

Keep your routes updated. Using InnoBus, identify data such as: places with the largest passenger traffic, passenger-kilometer (pkm) index, occupancy, and other statistics, which will let you make well-based decisions in real time.

## 2

### Prevent frauds and counting manipulation

Prevent frauds and alterations of the passenger counting; InnoBus' warning system will allow you to collect time and date information where suspicious events frequently occur.

## 3

### Settle your operation safely

Know the daily income from each of the vehicles in your fleet; InnoBus matches the preset fares with the total passenger counting, giving you numbers that will allow you to safely validate the revenue from your operation.

## 4

### Know what happens inside each vehicle

An onboard camera will let you identify, opportunely, what happens inside the vehicle at any moment of the day.

## 5

### Your information available **anywhere**

All information available 24 hours a day on the web, accessing from any device with internet connection.

## 6

### Build your **solution**

Based on your needs, choose and add to the passenger counting solution the following modules: monitoring, route control, and maintenance and human resources, obtaining total control over your company's operation.
