

**Think big, learn fast
& work with us!**

ABOUT US

guane is a scientific-research based company aimed at applying natural and data sciences tools to solve industry problems and supporting the development of Colombian economy and its engagement into the fourth industrial revolution.

Our highly skilled team formulates scientifically-based solutions that combine tools from **Internet of Things, Business Intelligence and Artificial Intelligence** to provide efficient and complete solutions for our clients.

We offer solutions on energy, health care, business intelligence and environment

guane
enterprises

OUR HISTORY

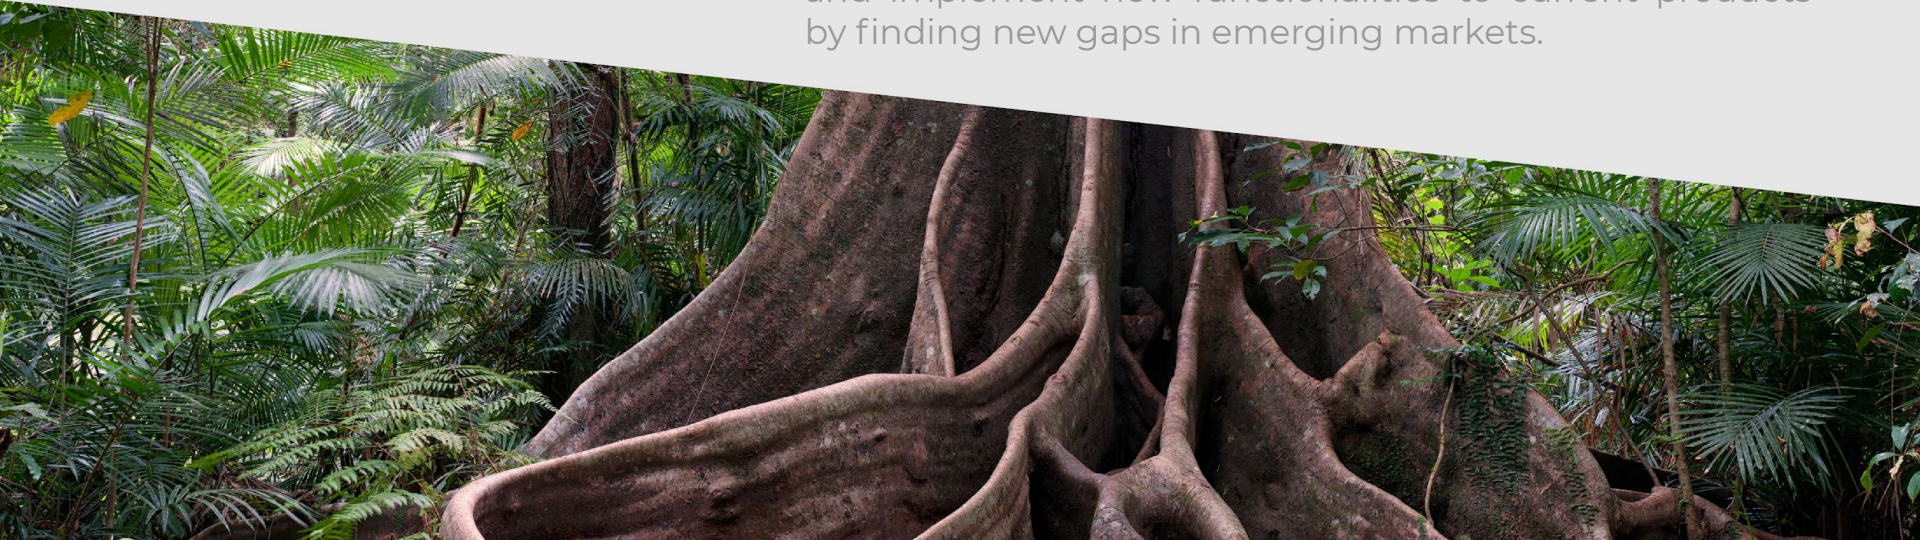

guane was created on May 7, 2018 with a share capital of USD 1500. Since then, by the effort, passion and perfectionist-character of its founders, the company made its way through the giants of the industry. In less two two years, **guane** has developed AI-based solutions for energy, logistics and healthcare industries in Colombia and USA with an annual revenue of USD 300.000. In this growing expansion, **guane** has generated more than 18 new permanent jobs and signed commercialization agreements with national and foreign companies.

OUR MINDSET

guane seeks to generate new opportunities for local scientists and engineers and to boost the transfer of knowledge between academia and private and public companies.

We are decided to convert our company in a regional leader with developments based on artificial intelligence and implement new functionalities to current products by finding new gaps in emerging markets.

OUR WAY TO SUCCEED

SECURE

In developing any AI solution, safety is a basic requirement to prevent a potential information wrong use or external attacks.

guane offers you full support, warranty and peace of mind that every byte is safe

SCALABLE

Prototypes are a very good beginning but making it bigger is a major challenge. Our products are ready for fast escalations within your organization

guane is always ready to grow with your team

HUMANIZED

For us, Human Centered design is foundational. Our goal is to achieve the ideal performance of people through our tech-based solutions.

In **guane**, humans are our top priority

CONNECTED

Our solutions are fully prepared to provide a wide spectrum of data connections to offer the best experience of use and the maximum performance.

Connectivity is the basis of every **guane** solution

CONTROLLED

All outputs in our products are being validated in a timely manner to ensure consistency and reliability during massive data processing

Control is one of the strongest features in all **guane** products

DOCUMENT UNDERSTANDING

guane provides customized computer-vision-based-on solutions for pattern recognition, image classification, optical character recognition in printed and handwritten documents and document understanding in images or video.

guane develops and implements customized natural language processing algorithms for data extraction and its respective reconfiguration to assist users by managing massive amounts of unstructured information

AUTOMATIC PREDICTIVE MODELING

guane has established reliable statistical modeling products that help our customers to make the best decision in their businesses by having accurate predictions about critical parameters in their operations

Charlie_Bot is capable to understand non-structured information and deliver an organized way to provide quotations for logistic systems, improving time and resources commonly used to complete this task.

By using Charlie our customer was able to save operation costs up to 50% and get focused on spending more time in closing new businesses instead of doing -routinary manual work.

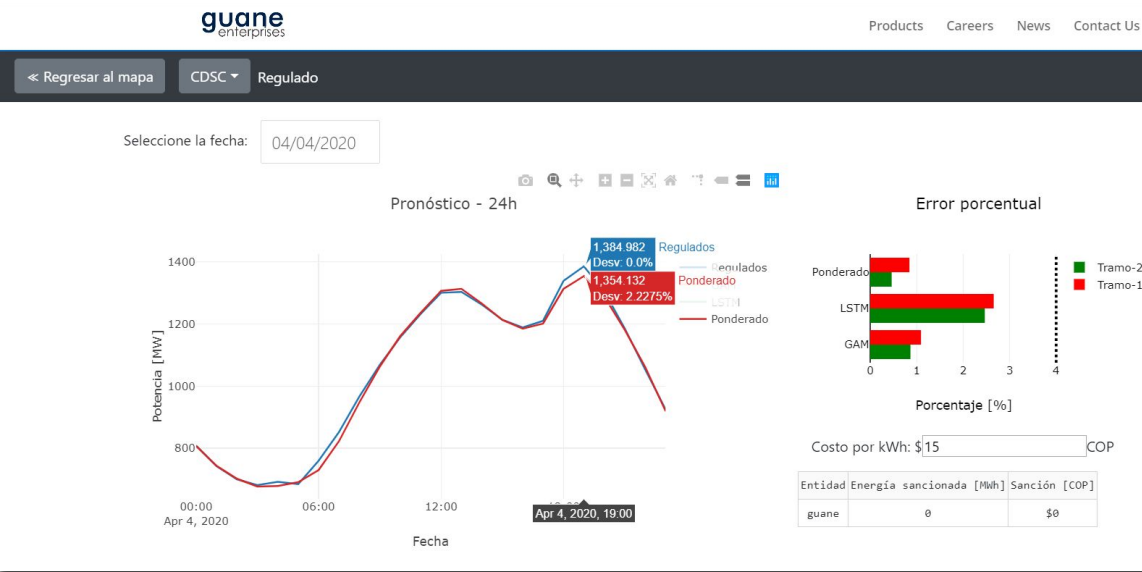

BURERE / AUTOMATIC PREDICTIVE MODELING

Burere was born because of the urgent need of our customers to reduce operational costs related with fuel consumption in trucks used for freight transportation.

Burere had a significant relevance in the Supply Chain setting of our customers since inputs related with fuel spent were considered to develop customized maintenance plans taking into account environmental, mechanical and use conditions.

THORI / AUTOMATIC PREDICTIVE MODELING

Thori was implemented to assist Energy Distribution Companies (EDC's) to deliver accurate predictions about monthly consumption. Companies in this sector must plan their purchasing with minimal errors in order to avoid government fees or extra charges.

Thori was validated by several energy companies through monthly forecasting in which Guane accuracy statistical modeling was demonstrated consistently by achieving forecasts with errors near to 1% compared to actual energy consumption expected.

SPECIAL AWARDS

INNOMARATON - SAP

Our team got the First Place in Colombia and the Third Place in LATAM SAP Innomarathon 2019 in New York.

SPECIAL AWARDS

SCIENCEPRENEURS TOP 10

On August 12th, 2019: guane was selected as part of the Top 10 Colombian SCIENCEPRENEURS of the Academia-Industry Training of the Swiss-Colombian government.
