

WHO WE ARE

Established in Joinville since 2015, Banga Pet and Endesa Business Group stands out in the pet and product development sectors. Since 2018, we have expanded our import, distribution and pet project operations in the states of SC, PR and SP, both in person and online throughout Brazil. In 2021, reinforcing the Group and the Katzi brand, we inaugurated the sanitary granule production unit for cats in Pinhais-PR, consolidating our presence and commitment to the market.

Third-party branding is crucial for optimization and agility in the pet shop sector. In the sanitary granule market, which is still relatively unexplored, the Banga Pet/Endesa Solutions group stands out with exclusive formulas, seeking differentiation and building strategic partnerships.

With a focus on our core business, we seek efficiency through access to expertise, scalability, product customization, risk and operating cost reduction, and flexibility in production.

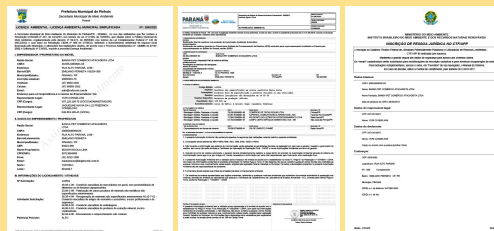

We offer competitive prices, continuous innovation, consistent quality and availability, as well as improved customer service.

We guarantee a competitive production cost, access to exclusive formulas, collaboration in innovation, efficiency in the supply chain and agility in the expansion of the product line.

OUR REGULATORY COMPLIANCE

Environmental License - SMMA
Environmental Authorization - IAT
Federal Technical Registry - IBAMA (Brazilian Institute of the Environment and Renewable Natural Resources)

Mission: Our mission is the well-being of consumers, promoting the full satisfaction of guardians and pets.

Vision: To be the first choice of all pet consumers.

Purpose: To be a pioneer in technological innovation, developing solutions to improve the lives of consumers.

Strategy: To be the focal company of our supply chain, developing partnerships with our customers and suppliers, adding maximum value for all stakeholders.

OUR PRODUCTS

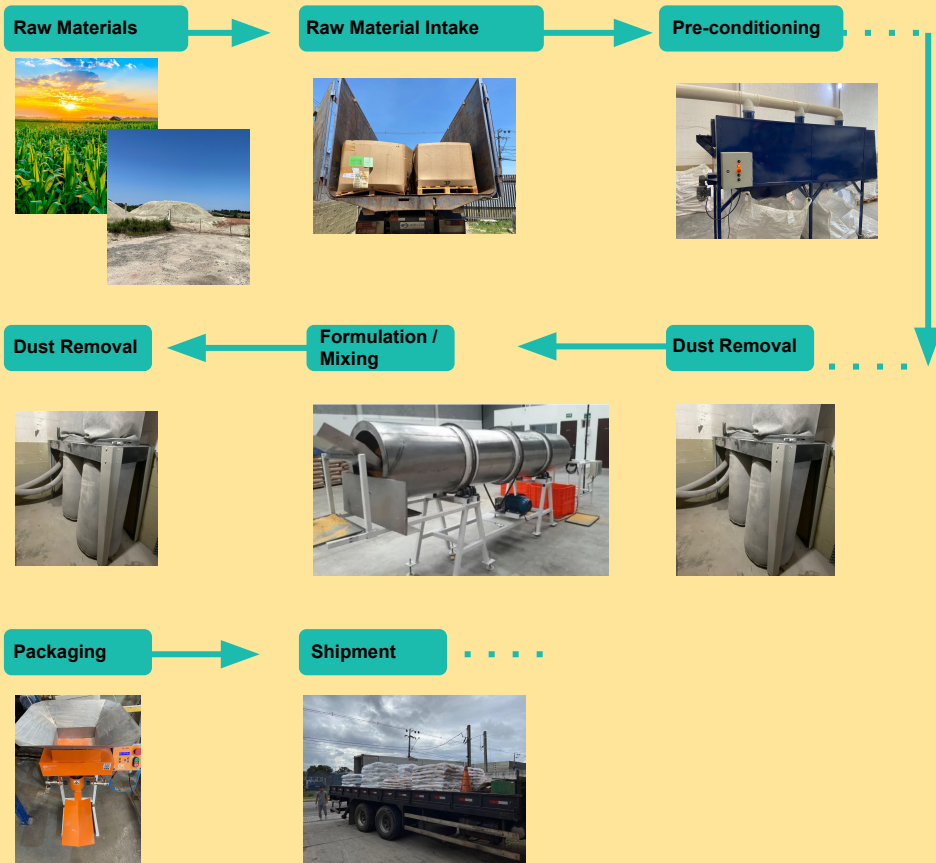

We use vegetable inputs based on corn and cassava for the manufacture of high quality products. In addition, we incorporate activated carbon into our composition, which provides several benefits, such as:

- **Adsorption of impurities:** Activated carbon has a high adsorption capacity, which means that it can remove impurities and toxins from our products. This ensures a purer and safer final product for our consumers.
- **Deodorizing properties:** Activated carbon also has deodorizing properties, which helps to eliminate unpleasant odors.
- **Increased shelf life:** Activated carbon can help to increase the shelf life of our products, as it slows down oxidation and deterioration.

OUR PROCESS

Banga Pet is also synonymous with sustainability:

- 100% of the energy used in the office and production process is renewable;
- We carry out the reverse logistics of the bundles of the master packaging of the products;
- We use renewable raw materials in the products;
- We use inputs from the circular economy.
