WEB DEVELOPMENT

A more comprehensive list of tasks to which web development commonly refers, may include web engineering, web design, web content development, client-side/server-side scripting, web server, network security configuration and e-commerce solutions.

On web development, we work with the last technologies available in the market, our technology stack in frontend and backend include languages and frameworks like HTML5, CSS3, Javascript, ASP.NET, PHP frameworks (Laravel, Codeigniter, etc), Ruby on Rails, Wordpress, the MEAN Stack (MongoDB, ExpressJS, AngularJS, NodeJS) and more.

Go-Labs

MOBILE DEVELOPMENT

smart phone

Lorem ipsum dolor sit amet, consectetur adipisicing elit, sed do eiusmod tempor incididunt ut labore et dolore magna

We develop native applications in Android and iOS, also we have experience developing hybrid apps using frameworks like PhoneGap, and Ionic. If you need a web site with mobile compatibility, we have software engineers with vast skills in web concepts like Mobile First and Responsive Design.

QUALITY ASSURANCE

QA involves the entire software development PROCESS - monitoring and improving the process.

We belive that quality assurance should be part of the whole development process and be included earlier rather than later.
We have professionals that will make sure we always deliver the best quality solutions.

We'd love to help with:
-Test plans and test cases creation, execution and reporting
-Test automation (Selenium, PhantomJS)
-Regression Testing
-White and Black box Testing
-Integration testing
-Performance testing
-and many others.
