Great daytime time zone compatibility with America and Europe as well as flexibility to adapt to each specific project.

OUR
SERVICES

SAP PROGRAMMING & SOFTWARE DEVELOPMENT

SAP Programming Service Centre

From our programming service centre in Argentina, we collaborate with customers and strategic alliances in USA, Spain and Latin America.

We have strategic alliances in USA, Spain and Latin America

We offer remote programming services for implementation projects and corrective and evolutionary maintenance with our self-made methodology focusing on quality assurance, experience and accumulated knowledge in large-scale projects.

Software Development

Technology presents us with new opportunities to enhance our business through mobile apps.

Most part of our daily tasks are done through a smartphone. Technology is changing the way we do things and the companies must adapt to it or make room for the ones who do.

Having mobile presence nowadays is vital for any company. Therefore, we develop high quality mobile apps with our team of professional experts: analyst, designers, programmers and creatives that use the last technologies to deliver portable and custom made apps.

Types of services

- Service of development team assigned to the customer's project. The team has technical leadership and ensures quality to meet the project's goals.
- On demand consultancy.
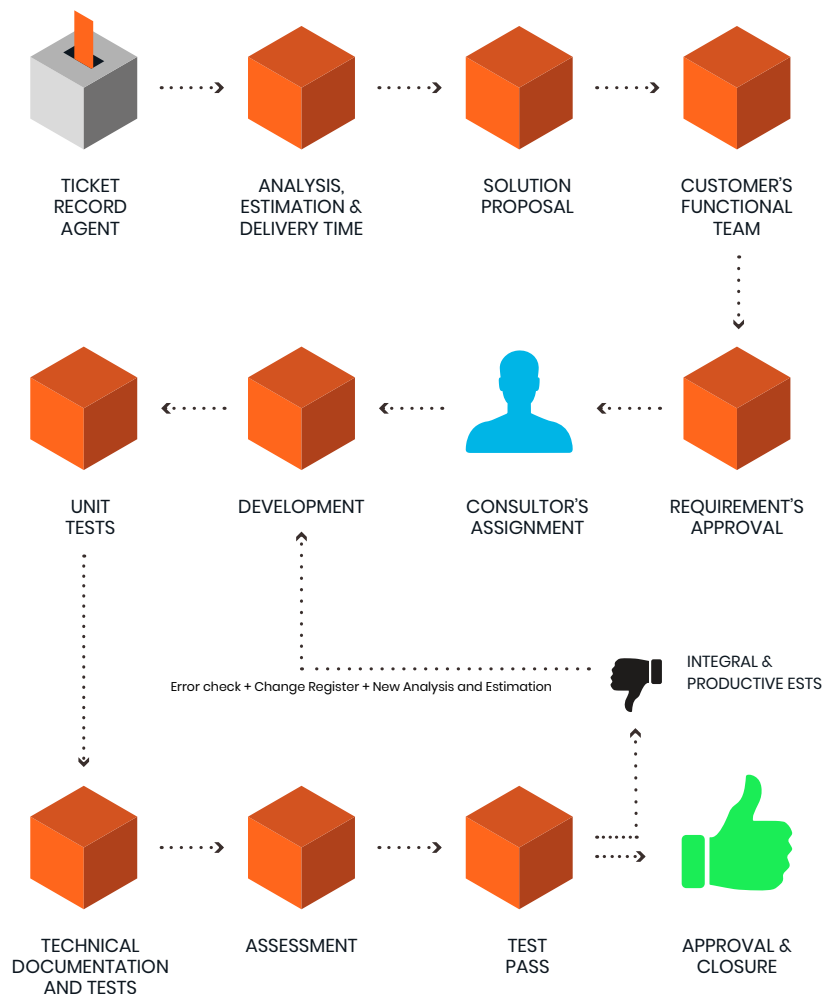

WORK FLOW

SOFTWARE FACTORY CYCLE

4

E ach requirement that enters the Software Factory (**SF**) is managed through a workflow diagram form start to finish. Once received the requirement, the functional specification (**FS**) is entered with a ticket ID to the **SF**.

If the requirement fulfills all the points, we will proceed with the delivery time estimation and get back to the client for its approval. This task is performed by the technical responsible of the **SF**.

The estimation comprehend the requirement management, unit tests and technical documentation.

Once the estimated hours are approved, we scheduled a delivery time and assign a developer to follow it up until its approval and closure.

CUTTING EDGE TECHNOLOGY

6

SAP HANA - SAP UI5 / FIORI - SAP R3 / PI

Research & Development

Our team is constantly updated in the new trends of technological tools for cloud based companies. Likewise, Sysmel has cutting edge technology at SAP environment making use of SAP Hana and SAP Fiori tools allowing us to improve the user experience, data inter-pretation and resources management of the company.

SAP FIORI

SAP Fiori offers a friendly experience for the consumer to its corporate SAP users.
This is done by providing a collection of apps for diverse commercial roles that admit functions of software SAP that are more broadly used in a simple

and easy interface that works perfectly on desktop computers, tablets or smartphones.

SAP HANA

SAP HANA removes the workload of maintaining inherited systems separated and data in silos, which allows to operate live and take better business decisions of business in a new digital economy.

SAP HANA combines a database that complies with ACID with services of apps, speed analytics and flexible tools of data acquisition in one in-memory platform.

SAP R3 / PI integration

To centralize the information shift between SAP systems and / or

Our Growth Indicators

- Lack of Staff rotation
- Accumulated experience.
- Management of the team work with a technical leader.
- Functional support that speeds up the development time.

non SAP, SAP PI provides a central point of data exchange, between the systems of a norganization allowing a more efficient connectivity, with a lower quantity of connections present, a traffic of messages centralized and controlled through queue.

A TEAM OF EXPERTS

SAP experiencie
