Service Specialist Consultancy

We support you in detecting areas of opportunity in your company seeking to optimize resources. Through the application of a specialized diagnosis to identify Integration and Telecommunications Systems, we can conclude with the areas that must be attacked to improve performance. You can consider consulting to improve in:

- a. Operational efficiency
- b. Performance indicators
- c. Decision making
- d. Success factors
- e. Digitization of information
- f. Industry transformation

Software factories

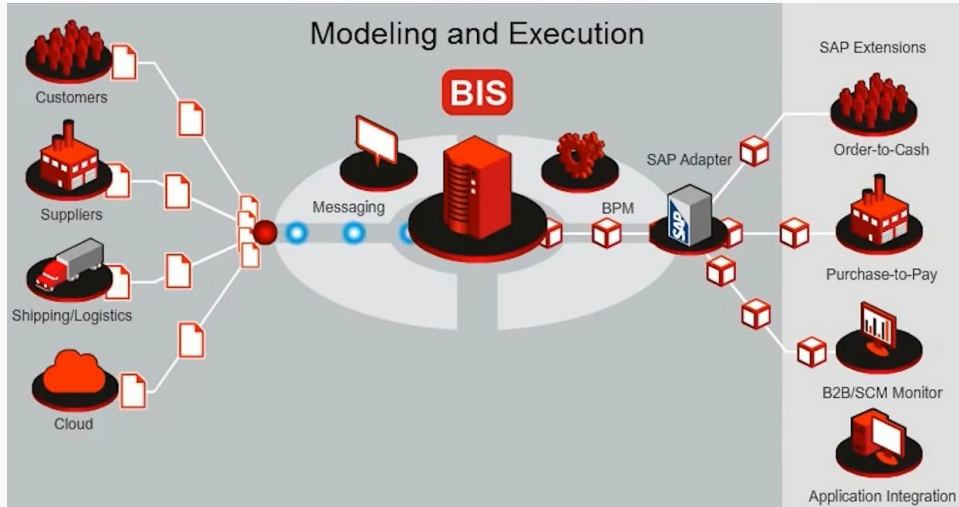

We create software and Apps multi-platform (capable of running on different devices). We can let the software is working with infrastructure, or boarding the cloud scheme, avoiding the administration of their infrastructure.

We are certified in Moprosoft Level 2 and **CMMI Level 3**, ISO 27001, ensuring the quality of our services.

Socially Responsible Company, Great place to work,
Gender Equality

EDI (Electronic Data Exchange)

Enterprise Systems Integration Services

Connect with your business partners and collaborators through EDI regardless of the size of your company. EDI solutions for any industry (Logistics, Automotive, Retail, etc.). EDI with any trading partner made easy.

INDUSTRIAL INTERNET OF THINGS

Design and production of technological solutions based on secure hardware for the Internet of Things - IoT and Industry 4.0

Infrastructure and cybersecurity

Network and communications solutions, with experience and certifications in the leading brands in the industry, complying with processes of the best ITIL practices aligned to ISO 27001 for your company or office of high quality, with a constant and efficient speed in which the processes of hiring and cancellation are not cumbersome.

We close security gaps by identifying them in a timely manner and taking mitigation and elimination actions, considering the growing number of cyber threats, which can compromise business continuity, and even more critically, the existence of the organization.

Augmented Reality and Virtual Reality

Now you can count on technology that allows you to conceptualize in a more visual way, either by superimposing virtual elements on our vision of reality or by entering an environment of scenes and objects that appear real, where the user has the sensation of being immersed in he

Robotics

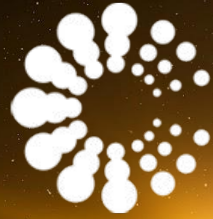

Complementation robotics, artificial intelligence, exoskeletons, manned robots, manned robots, mechatronic equipment and any device that increases human potential
