

TEZMAKSAN

TEZMAKSAN Machinery Industry and Trade JSC

Having been operating in the machine tools sector for more than 40 years, Tezmaksan is the leading brand in the Turkish machine market, providing CNC sales, servicing, leasing, technological consultancy, financing, software and training services in the machining industry.

As a company that provides full service to its customers with production, project consultancy and turnkey special projects, Tezmaksan continues to create value for all its stakeholders in the future by conducting activities at international standards with an understanding of corporate governance, customer satisfaction, sustainability and social responsibility. Tezmaksan, the first company in the sector with ISO and EFQM certificates, has already installed more than 17 thousand CNC sets in Türkiye.

Tezmaksan continues to work at three facilities in İstanbul Bayrampaşa (Headquarter), İstanbul Kırâç and İstanbul Thrace Free Zone with a total indoor area of 50 thousand square meters. The company provides sales and after-sales technical services to its customers with the regional offices in Adana, Ankara, Bursa, İzmir, and Konya with more than 250 employees.

AB MARKET.

AB Market, established in 2006, is the partner of Rockwell Automation in Türkiye and offers optimum solutions in industrial automation.

It provides material sales, engineering, system design, project design, manufacturing, technical service and consultancy services in the electrical, electronics and CNC sectors.

Vega®

Vega Machinery, established in 2006, has high reputation for providing service and training of welding machines & welding consumables.

Its product range includes welding and cutting machines, welding generators, welding wires, brazing wires and welding consumables.

Vega is the distributor of Miller, Mosa, Bernard, etc. which are very well-known brands in welding sector.

TEZMAKSAN ROBOT TECHNOLOGIES

Tezmaksan Robot Technologies, established in 2019, is an engineering and robotic automation company that provides consultancy, project, installation and after-sales services in a closed area of 3 thousand square meters in İstanbul.

TEZMAKSAN Technology Rental

Tezmaksan Technology Renting Services, established in 2018, is the first and only company in Türkiye providing professional renting solutions to Turkish industrial companies. It provides services in machine tools and technology rental.

KaPaSiTeMaTiK

With Tezmaksan brand, the company also offers the CNC Machine Analysis Platform Kapisitematik, described as the technology that makes the factory fit in your pocket.

It provides the user with multifaceted gains thanks to its ability to analyse production and machine efficiency, and report problems with instant feedback.

PARKURDA

Parkurda.com is the first and only B2B e-commerce business platform that brings together the stakeholders of the machining industry.

Parkurda brings together those who want to have contract work done and get work, find CNC operators and receive machine training.

CubeBOX

The CubeBOX system from Tezmaksan Robot Technologies offers seamless integration and maximum flexibility. Compatible with all CNC machines, its cost-effectiveness, quick commissioning, and easy part exchange allows you to enjoy advanced automation without hefty investments. Automation is for everyone. Take your CNC automation to new heights and give our expert team a call today. Collaborative Robots can also be adapted to all our CubeBOX systems.

ROBOCAM+ Plus

By simplifying the programming process, RoboCAM streamlines automation tasks, allowing engineers to focus on design and innovation rather than intricate programming.

Originally designed for CubeBOX robot automation systems, RoboCAM has evolved into a versatile CNC software solution compatible with all robotic CNC machines.

The New Factory

The most significant development for Tezmaksan in 2024 was the opening of the factory in the Central Anatolian city of Sivas, with equipment worth of 15 million euros and a construction cost of 37.5 million Turkish Lira. The factory was constructed in an industrial land of 53 thousand square meters and has 10 thousand square meters of covered area. The additional 18 thousand square meters of factory space is under construction, which will increase the production capacity by 300%.

The LEED Gold certified Sivas factory carries the feature of a green factory as it is in compliance with the European Green Deal and environmental sustainability principles.

TEZMAKSAN Robot Technologies

Tezmaksan has utilised the knowledge and experience gained from its customers to develop smart and user friendly robot solutions for the machining industry. The company has transformed the demands of its customers into products, under the umbrella of Tezmaksan Robot Technologies and make them available to its customers. As the leading European manufacturer of robotics and automation, Tezmaksan Robot Technologies has developed the automation system, called CubeBOX for CNC machine tending, ensuring 24-hour operation without downtime or inaccuracies, boosting efficiency by up to 50 per cent, resulting in a return on investment (ROI) within eight months on average.

The system automates CNC machine tending through operator-free loading and unloading of workpieces in CNC lathes, machining centres and grinding machines. CubeBOX is a modular solution designed to automate machining tending. Integrated with RoboCAM+, Tezmaksan's own CNC robot programming software platform, it simplifies the integration process, eliminating the need for prior robot programming knowledge by converting 2D CAD drawings into CAM instructions. This helps to plug the skills gap by reducing operator involvement in machine tending thanks to its user-friendly design.

The system's standard structure is compatible with all CNC machines and control units, adaptable to various robot brands and it costs 20 per cent less than company-specific robot integration systems. The system enables multiple machines to operate seamlessly without interruptions, such as those stemming from loading and unloading processes. Moreover, its plug-and-play nature allows for quick commissioning, often completed in a single day.

Unlike traditional automation solutions that require a dedicated space, the CubeBOX is portable and can be easily moved around the shop floor, allowing for seamless integration with various CNC machines. This modular approach not only maximises floor space availability, but also eliminates the need for robotic set ups for each individual machine.

Export Markets and Networks

In 2023, Tezmaksan has achieved a 45% growth in the domestic market and strengthened its position in export markets by reaching 36 countries.

The company has introduced a total of 7 varieties of 5 different products last year.

In 2024, Tezmaksan has opened the Amsterdam office in the Netherlands with the aim of strengthening its dealer network in Europe.

The new office will support the export activities and help the company achieve a more effective position in the international markets.
