JULASOFT

Software Solutions

Team software

development

At **Julasoft** we develop innovative technological solutions, while continuously evolving with our clients. Our goal is to maintain an entrepreneurial spirit within the organization while working together with other actors who seek innovation in order to provide specific solutions in different countries around the world.

11 years of experience

50 Profesionals

IN EVERYTHING THERE
A PART OF ALL

JULASOFT

Throughout the years we have carried out successful projects all over world.

Our **strategic alliances** today are valued long-term relationships.

WORK METHODOLOGY

We create Agile Cells, with a highly senior team

01

Through analysis we identify the clients needs as well as define the **technological solution** that best suits the business and its evolution.

02

CThe **proposal** is customized and a work team will be aligned with the detected needs. **(Agile cell).**

03

The project will be monitored throughout the **entire process**. We co-build each stage with the client.

04

Once the work is closed, we will **adjust** the project and transfer the **knowledge** so the client can continue with the technological solution autonomously.
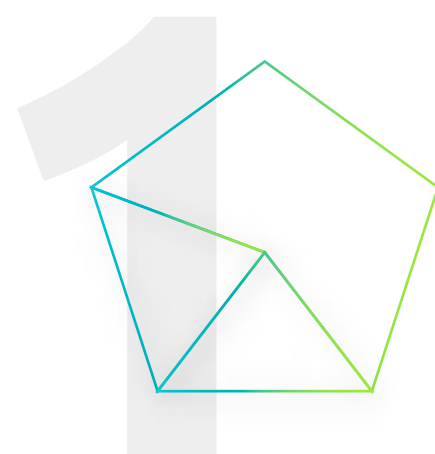

05

Finally, we monitor the client by providing **preventive**, **corrective** and **evolutionary support** for the project.

We have a **specialized team**
in technology committed to perfect results.

Our 3 pillars:

1
TEAMWORK

2
INNOVATION PROCESS

3
CUSTOMER ORIENTATION

We implement strategies and last generation technology for companies who are seeking to position themselves and increase their value.
