About Us

Foshan City Kamchung Building Materials Co., Ltd., founded in 2013, is a global provider of building board solutions integrating R&D, production and sales. With more than ten years of in-depth cultivation in the industry, we have established in-depth strategic cooperation with a number of leading domestic manufacturing bases, focusing on the R&D and innovation of new environmentally friendly building materials such as fiber cement boards, calcium silicate boards and gypsum boards. Our products have passed international authoritative certifications such as ISO and CE, providing satisfying services to more than 3000 customers in 80 countries and regions around the world, and continuously offering high-quality building materials support for projects such as large-scale infrastructure, commercial complexes and high-end residential buildings.

Cooperative Partners

PRODUCTS

Calcium Silicate Board

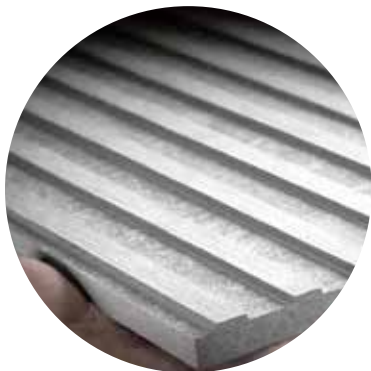

Crafted from natural materials like cement and plant fibers, our calcium silicate board is eco-friendly with top-tier fire resistance (non-combustible Class A1). It won't burn or release toxic fumes in fires, buying precious escape time. Boasting ultra-long durability, it resists acids, alkalis, moisture, and pests—ideal for humid coastal/tropical areas. It's appropriate for commercial/industrial ceilings, partitions, home decor, furniture liners, and billboards.

Fiber Cement Board

With a composition similar to calcium silicate board but enhanced performance, it's lightweight yet high-strength—more cost-effective than traditional masonry. Asbestos-free and non-toxic, it suits diverse uses: exterior cladding, interior partitions/ceilings, roof substrates, plus industrial spaces like cold storage, chemical plants, and warehouses.

Grooved Cement Board

Our premium grooved cement board features unique 3D surface textures, adding striking design appeal to spaces. Fully customizable, it fits interior feature walls (living rooms, bedrooms) and exterior facades, beloved by designers.

The innovative grooving process retains fiber cement's weather resistance, durability, strength, and insulation while elevating aesthetics—ideal for restaurants, galleries, cafes, malls, and entertainment venues. You can choose from varied groove patterns to create a one-of-a-kind style.

SPECIFICATIONS

Fiber Cement Board

thickness	Width	Length
5-30 mm	1220/1200/610 mm	2440/2400/3000 mm
Remark: For other size requirements, please contact us for inquiries.		

Materials:	portland cement,quartz sand,cellulose fiber etc;
density:	1.2-1.5g/cm3
Incombustibility:	Class A1
Water Content:	≤10%
Water absorption:	≤28%
Thermal conduction:	≤0.29W/M.K
Bending strength(dry):	≥16MPa
Dry shrinking rate:	<0.09%
Water-impermeability:	through water immersing for 24hours, no waterdrop appears on bottom surface
Anti-freeze:	no distortion after 25 repeat cycles of freezing and thawing
